Terri A. Lorenzon, Director
Environmental Quality Council

Good Day -

It is of utmost importance for everyone in the Sheridan area to be aware of the water problems that are being caused by CBM development and the lack of regulation by the DEQ during these times of severe drought - I have been flying over CBM dev. for the last six years and I have heard stories from ranchers concerning water being discharged down riverbeds illogically and out of season. This water has killed native grasses, trees, and has been wantonly wasted thru aeration. Why is it, that water, our most precious commodity, is being wasted and polluted with minerals from extraction, and sent downstream to cause more damage?

Please implement rules to address the CBM discharge water problems. This is not just for us today, but for future generations. What decisions we as citizens make today is of moral & ethical importance for the future.
