

Madam Chairwoman, Members of the Committee

I rise in opposition to the
Citizens Petition, I ranch
in Campbell County south of Lenoir
and we have had considerable methane
development in our place for the last
8 years. We have worked with
6 or now 10 different oil & gas
companies. We have managed our
contracts & our dealings privately
with industry without ^{restriction} government
interference. We wish it to
STAY that way.

Having said that I speak
for the 100's of landowners, workers
& citizens of Wyo that are in opposition
to ~~that~~ this as well & wish this
to be entered into the record.

WE WANT OUR WATER!

Rec'd
1-18-07

We are the landowners and people affected every day by the development of Coalbed Natural Gas (CBNG) in Wyoming.

We oppose the Environmental Quality Council's (EQC) unfounded adoption of the Powder River Basin Resource Council's proposed amendments to the Wyoming water quality rules, as these changes are an infringement on private property rights. They are also unrealistic and constitute a government intervention without just compensation.

We respect the current reasonable water regulations, which include the wide variety of beneficial uses for CBNG water. We do not support changes to these regulations that would intrude upon private property rights, and possibly, our own well-being.

We understand the variation in water quality across the Powder River Basin and Wyoming firsthand. We can tell you that a blanket rule or "one size fits all" solution regulating CBNG water will not work.

We call instead for the EQC and other Wyoming regulatory bodies to utilize the wide variety of water management techniques that exist and continue to grow. This approach works best to meet the needs of landowners, operators, and the environment.

X - If you have CBNG development on your land – please put an X in front of your name.

WE WANT OUR WATER!

Rec'd
1-18-07

We are the landowners and people affected every day by the development of Coalbed Natural Gas (CBNG) in Wyoming.

We oppose the Environmental Quality Council's (EQC) unfounded adoption of the Powder River Basin Resource Council's proposed amendments to the Wyoming water quality rules, as these changes are an infringement on private property rights. They are also unrealistic and constitute a government intervention without just compensation.

We respect the current reasonable water regulations, which include the wide variety of beneficial uses for CBNG water. We do not support changes to these regulations that would intrude upon private property rights, and possibly, our own well-being.

We understand the variation in water quality across the Powder River Basin and Wyoming firsthand. We can tell you that a blanket rule or "one size fits all" solution regulating CBNG water will not work.

We call instead for the EQC and other Wyoming regulatory bodies to utilize the wide variety of water management techniques that exist and continue to grow. This approach works best to meet the needs of landowners, operators, and the environment.

X - If you have CBNG development on your land - please put an X in front of your name.
