Terri A. Lorenzon, Director
Environmental Quality Council

RE: DEQ's Proposed Rule/Policy (Appendix H) regarding Chapter 1, Section 20.

Dear Mr. Gordon,

I am an Adv. Facilities Specialist working Methane Gas Gathering issues for Pennaco/Marathon Oil Company in Gillette, WY and have 30+ years with Marathon. I am 51 and a Wyoming Native and have been fortunate enough to live in State for all but 6 years. I presently have a mortgage, 2 vehicles, and a vested interest in Gillette, Campbell County, and Wyoming. I also plan on retiring in Wyoming within the next 5 years.

I oppose the Department of Environmental Quality's proposed Rule (Appendix H) or Policy regarding Chapter 1, Section 20.

- I oppose any rulemaking that reduces or eliminates the ability for coalbed produced water to be discharged and thus beneficially used.
- Water has to be in the stream and constantly available to ranchers, livestock and wildlife if it is to be beneficially re-used.

I would also like to make the following points about this rule:

- Appendix II will eliminate a source of water needed by ranchers and will negatively affect livestock and wildlife uses
- Chapter 1, Section 20 and the Ag Use Protection Policy does not protect existing uses of CBM produced waters.
- If a rancher wants water to flow down his drainage, he may be prohibited to do so if WYDEQ arbitrarily sets SAR and EC limits that CBM produced water cannot meet.
- The section on "Naturally Irrigated Lands" would allow a single landowner or even a third party to deprive landowners from beneficial use of water suitable for wildlife and livestock.
- Natural rainwater flowing down the drainages during storms does not typically meet the default limits spelled out in the Draft Section 20 rule/Policy.
- This policy/rule has the effect of limiting the jurisdiction of the State Engineer and appropriated water rights.

Janey Peth

- The Water and Waste Advisory Board suggested to WYDEQ that it consider water quality standards based on the Bridger Montana Study. This study is more appropriate for use in Wyoming as the study makes use of soils similar to that in Wyoming, rather than the California study currently being used. DEQ should heed the advice of the WWAB.
- This Rule/Policy places the Operator in a position where existing water management plans and structures such as reservoirs are made obsolete, resulting in substantial costs to replace, possibly making fields uneconomical.
- Operators recognize water management is a critical path to their development plans. Operators will not likely drill/construct projects until a water management plan can be firmed up. This policy/rule will likely have a negative effect on future development of CBNG resources in the Powder River Basin.
- CBNG industry is already carrying a sizable regulatory burden. Further regulation puts further production at jeopardy. If further production/ development is in jeopardy economic impacts are likely to follow.
- Water management decisions need to be left to responsible landowners and operators. Don't take away use of reservoirs (which may not be capable of containing the 50 year/24 hour event and all produced water) as a viable water management tool.

Thank you for the opportunity to comment on this rule. Again, please register my opposition to making this a rule or policy. Please feel free to contact me at 307 682 1275 if you have any questions regarding my opinion. I love Wyoming and do not want to lose my ability to make a living in this wonderful state!

Sincerely,

Gregg G. Putman
