

will be sending out a second email to the SEO , OGCC and OSL asking for their take on the content of this letter. John, since Linc is wanting a fast track and we are sending out RFP's to consultants, what issues raised here catch your attention and concern regarding permitting that we might not have previously alerted Linc. Also, I think this area is close to the Moore Ranch uranium mine. If the Parkman is an oil producer for Yates, do we have a stronger aquifer exemption argument for Uranium 1? Lastly, let me know if there is a violation regarding the surface discharges. For all, I think we need to formally notify Linc of these issues, and would like some help on taking the content of this letter down to the specific permitting issues that we will have. From: Tim Barber [mailto:tbarber@yatespetroleum.com]

Please find attached a letter from Yates Petroleum re: Linc Energy Operations in Section 36 of T44N R74W as well as other locations. Please feel free to route this to applicable folks within your organizations as you see appropriate. In this letter we express some concerns and request answers from you agency about various issues associated with Linc's activities. Yates would appreciate a response concerning the communicated questions and issues from your agency and thanks you in advance for your interest and attention as we know that your time is limited and valuable. I would be happy to provide additional information and answer any questions that you might have after you read the letter. Please feel free to reach me by email or by phone at 307-685-8423. Tim Barber Environmental / Federal Regulatory Supervisor Yates Petroleum

Mark and Luke, given the clutter of wells and Yates interests in this section, is it even possible that Linc could submit a permit application that satisfies our adjudication (and any other legal/landowner) requirements? Were we aware of all of the clutter, and the horizontal wells? I will be sending out a second email to the SEO , OGCC and OSL asking for their take on the content of this letter. Don: On the first page about 2/3 of the way down is the statement "...the Greasewood test that resulted in groundwater contamination." Do you have any knowledge of what this test may have been and if there is any truth to the statement? Leah: On the second page about 1/2 way down is the statement: "Many of Linc's wells have been drilled, have had pumps set in them, and have been pumped, discharging water from the various wells". Please check to see if Linc Energy has applied for coverage under our general permit for short term discharge. If not, have they been in contact with WYPDES staff on the issue? Dennis: On the last page in item #6 there is allegation of use of misters. Do you know of such misters and/or have we issued any permits to construct misters by Linc Energy? Barb: On the last page, item 3 there is discussion of construction activities. Have we issued Linc Energy any coverages under our storm water construction permits? Thanks all – if you could get back to me on these items during the first week of May I'd appreciate it.
