

We, the undersigned landowners, depend upon groundwater wells in the Fort Union formation in the Powder River Basin for our livestock and domestic water wells. We recently learned that the Wyoming DEQ recommended an aquifer exemption be granted for the Fort Union formation in conjunction with a permit for an exploratory underground coal gasification project proposed by an Australian company, Linc Energy. The Fort Union formation is the most important aquifer in the Powder River Basin supplying drinking and livestock water. We oppose this aquifer exemption and believe it is a violation of the Safe Drinking Water Act and that this action will set a precedent that will lead to the contamination and loss of an important and dwindling groundwater resource in the Powder River Basin.
