#### DEPARTMENT OF ENVIRONMENTAL QUALITY SOLID AND HAZARDOUS WASTE DIVISION HAZARDOUS WASTE MANAGEMENT

CHAPTER 2 IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

261/Subpart A Section 1. GENERAL.

...(ii)

261.1 (a) PURPOSE AND SCOPE.

- 261.1(a) (i) This Chapter identifies those waste materials which are subject to regulation as hazardous wastes under Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11, and Chapter 13 of these rules and regulations and which are subject to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations. In this Chapter:
- (A) Section 1 of this Chapter defines the terms "hazardous waste", identifies those wastes which are excluded from regulation under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapters 8 through 11; Chapter 12, Sections 1 through 8; and Chapter 13 of these rules and regulations and establishes special management requirements for hazardous waste produced by conditionally exempt small quantity generators and hazardous waste which is recycled.
- 261.1(a)(2) (B) Section 2 sets forth the criteria used by EPA to identify characteristics of hazardous waste and to list particular hazardous wastes.
- 261.1(a)(3) (C) Section 3 identifies characteristics of hazardous waste.
- (D) Section 4 lists particular hazardous wastes.
- 261.1(b)(1) (ii) The definition of waste material contained in Chapter 1, Section 1(f)(i) of these rules and regulations applies only to wastes that also are hazardous for the purposes of implementing W.S. 35-11-503(d). For example, it does not apply to materials (such as non-hazardous scrap, paper, textiles, or rubber) that are not otherwise hazardous wastes and that are recycled.
- (A) This Chapter identifies only some of the materials which are waste materials and hazardous wastes for purposes of W.S. 35-11-109(a); W.S. 35-11-110(a); W.S. 35-11-115; W.S. 35-11-503(d); Articles 7 and 9 of the Wyoming Environmental Quality Act; Chapter 1, Section 1(k)(i); Chapter 1, Section 1(l) of these rules and regulations; and RCRA Section 7003. A material which is not defined as a waste material in Chapter 1, Section 1(f)(i) of these rules and regulations, or is not a hazardous waste identified or listed in this Chapter, is still a waste material and a hazardous waste for purposes of these rules and regulations if:
- (I) In the case of W.S. 35-11-109(a); W.S. 35-11-10(a); W.S. 35-11-10(a); W.S. 35-11-503(d); and Chapter 1, Section 1(1) of these rules and regulations, the Department has reason to believe that the material may be a waste material within the meaning of W.S. 35-11-503(d) and Chapter 1, Section 1(f)(i) of these rules and regulations and a hazardous waste within the meaning of W.S. 35-11-103(d)(vii); or

| (II) | In | the | case | of | W.S. | 35-11-115; | W.S. | 35- |
|------|----|-----|------|----|------|------------|------|-----|
| ()   |    |     |      |    |      |            |      |     |

11-503(d); Articles 7 and 9 of the Wyoming Environmental Quality Act; Chapter 1, Section 1(k)(i) of these rules and regulations; and RCRA Section 7003, the statutory elements are established.

261.1(c) (iii) Definitions: The following terms, defined in Chapter 1, Section 1(f)(i) of these rules and regulations, apply for the purposes of the definition of "waste material" in Chapter 1, Section 1(f)(i) and to Section 1(f) of this Chapter, as well as Chapter 12, Sections 9 through 17 of these rules and regulations: "spent material," "sludge," "by-product," "reclaimed," "used or reused," "scrap metal," "recycled," "accumulated speculatively," "excluded scrap metal," "processed scrap metal," "home scrap metal," and "prompt scrap metal."

261.2 (b) DEFINITION OF WASTE MATERIAL.

(i) See Chapter 1, Section 1(f)(i) of these rules and regulations for the definition of "waste material." [Note: This definition for waste material is equivalent to the federal definition for solid waste.]

261.3 (c) DEFINITION OF HAZARDOUS WASTE.

(i) A waste material, as defined in Chapter 1, Section 1(f)(i) of these rules and regulations, is a hazardous waste if:

261.3(a)(1) (A) It is not excluded from regulation as a hazardous waste under Section 1(d)(ii) of this Chapter; and

261.3(a)(2)

(B) It meets any of the following criteria:

- (I) It exhibits any of the characteristics of hazardous waste identified in Section 3 of this Chapter. except ...(i) that However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under Section 1(d)(ii)(G) of this Chapter (the excluded waste) and any other waste material exhibiting a characteristic of hazardous waste under Section 3 of this Chapter is regulated as a hazardous waste only if it the mixture exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred or if it continues to exhibit any of the characteristics exhibited by the non-excluded wastes prior to mixture. Further, for the purposes of applying the Toxicity Characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in Table 1 to Section 3(e) of this Chapter that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture.
- ...(ii) (II) It is listed in Section 4 of this Chapter and has not been excluded from the lists in Section 4 by the Director under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations as designated in Appendix I.

...(iii) (III) It is a mixture of a waste material and a hazardous waste that is listed in Section 4 of this Chapter solely because it exhibits one or more of the characteristics of hazardous waste identified in Section 3 of this Chapter, unless the resultant mixture no longer exhibits any characteristic of hazardous waste identified in Section 3 of this Chapter, or unless the waste material is excluded from regulation under Section 1(d)(ii)(C) of this Chapter and the resultant mixture no longer exhibits any characteristic of hazardous waste identified in Section 3 of this Chapter for which the hazardous waste listed in Section 4 of this Chapter was listed. (However, nonwastewater mixtures are still subject to the requirements of Chapter 13 of these rules and regulations, even if they no longer exhibit a characteristic at the point of land disposal). Reserved

(IV) It is a mixture of waste material and one or more hazardous wastes listed in Section 4 of this Chapter and has not been excluded from Section 1(c)(i)(B) of this Chapter by the Director under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations, or Section 1(c)(vii) or Section 1(c)(viii) of this Chapter and listed in Appendix I; however, the following mixtures of waste materials and hazardous wastes listed in Section 4 of this Chapter are not hazardous wastes (except by application of Section 1(c)(i)(B)(I) or (II) of this Chapter) if the generator can demonstrate that the mixture consists of wastewater the discharge of which is subject to regulation under either Section 402 or Section 307(b) of the Clean Water Act (including wastewater) and

...(iv)(A) (1.) One or more of the following solvents listed in Section 4(b) of this Chapter - carbon tetrachloride, tetrachloroethylene, trichloroethylene - provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 1 part per million; or

...(iv)(B) (2.) One or more of the following spent solvents listed in Section 4(b) of this Chapter - methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents-provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million; or

...(iv)(C) (3.) One of the following wastes listed in Section 4(c) of this Chapter provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation -- heat exchanger bundle cleaning sludge from the petroleum refining industry (EPA Hazardous Waste No. K050), crude oil storage tank sediment from petroleum refining operations (EPA Hazardous Waste No. K169), clarified slurry oil tank sediment and/or in-line filter/separation solids from petroleum refining operations (EPA Hazardous Waste No. K170), spent hydrotreating catalyst (EPA Hazardous Waste No. K171), and spent hydrorefining catalyst (EPA Hazardous Waste No. K172); or

...(iv)(D) (4.) A discarded commercial chemical product, or chemical intermediate listed in Section 4(d) of this Chapter, arising from de minimis losses of these materials from manufacturing operations in which these materials are used as raw materials or are produced in the manufacturing process. For purposes of Section 1(c)(i)(B)(IV)(4.) of this Chapter, "de minimis" losses include those from normal material handling operations (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves or other devices used to transfer materials); minor leaks of process equipment, storage tanks or containers; leaks from well maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers that are rendered empty by that rinsing; or

...(iv)(E) (5.) Wastewater resulting from laboratory operations containing toxic (T) wastes listed in Section 4 of this Chapter, *provided* that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pre-treatment system or provided the wastes, combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pre-treatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation; or

...iv)(F) (6.) One or more of the following wastes listed in Section 4(c) of <u>this Chapter</u> these rules and regulations - wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K157) - provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine (including all amounts that can not be demonstrated to be reacted in the process, destroyed through treatment, or is recovered, i.e., what is discharged or volatilized) divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 parts per million (ppm) by weight; or

...(iv)(G) (7.) Wastewaters derived from the treatment of one or more of the following wastes listed in Section 4(c) of this Chapter - organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K156) - provided, that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 milligrams per liter.

(V) Rebuttable presumption for used oil. Used oil containing more than 1000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in Section 4 of this Chapter. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, by using an analytical method from SW-846, Third Edition, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in Appendix H of this Chapter). EPA Publication SW-846, Third Edition, is available for the cost of \$110.00 from the Government Printing Office, Superintendent of Documents, PO Box 371954, Pittsburgh, PA 15250-7954. 202-783-3238 (Document Number 955-001-00000-1).

...(v)(A) (1.) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling agreement, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

...(v)(B) (2.) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCS) removed from refrigeration units where the CFCS are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCS that have been mixed with used oil from sources other than refrigeration units.

- 261.3(b) (ii) A waste material which is not excluded from regulation under Section 1(c)(i)(A) of this Chapter becomes a hazardous waste when any of the following events occur:
- 261.3(b)(1) (A) In the case of a waste listed in Section 4 of this Chapter, when the waste first meets the listing description set forth in Section 4 of this Chapter.
- 261.3(b)(2) (B) In the case of a mixture of waste material and one or more listed hazardous wastes, when a hazardous waste listed in Section 4 of this Chapter is first added to the waste material.
- 261.3(b)(3) (C) In the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in Section 3 of this Chapter.
- 261.3(c) (iii) Unless and until it meets the criteria of Section 1(c)(iv) of this Chapter:
- 261.3(c)(1) (A) A hazardous waste will remain a hazardous waste.
- 261.3(c)(2)(i) (B) Except as otherwise provided in Sections 1(c)(iii)(C), 1(c)(vii) or 1(c)(viii) of this Chapter, any waste material generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate (but not including precipitation run-off) is a hazardous. (However, materials that are reclaimed from waste materials and that are used beneficially are not waste materials and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.)
- ...(ii) (C) The following waste materials are not hazardous even though they are generated from the treatment, storage, or disposal of a hazardous waste, unless they exhibit one or more of the characteristics of hazardous waste:
- ...(ii)(A) (I) Waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry (SIC Codes 331 and 332).
- ...(ii)(B) (II) Waste from burning any of the materials exempted from regulation by Sections 1(f)(i)(C)(IV) through and (VI) of this Chapter.
- (III) Nonwastewater residues, such as slag, ...(ii)(C)(1) resulting from high temperature metals recovery (HTMR) processing of K061, K062 or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations or industrial furnaces (as defined in paragraphs (F), (G), and (M) of the definition for "industrial waste" in Chapter 1, Section 1(f)(i) of these rules and regulations), that are disposed in units regulated under the Wyoming Solid Waste Rules and Regulations, provided that these residues meet the generic exclusion levels identified in the tables in Section 1(c)(iii) of this Chapter for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly and/or when the process or operation generating the waste changes. Persons claiming this exclusion in an enforcement action

...(ii)(C)(2)

(1.) A one-time notification and

certification must be placed in the facility's files and sent to the Department for K061, K062 or F006 HTMR residues that meet the generic exclusion levels for all constituents and do not exhibit any characteristics that are sent to units regulated under the Wyoming Solid Waste Rules and Regulations. The notification and certification that is placed in the generators or treaters files must be updated if the process or operation generating the waste changes and/or if the unit regulated under the Wyoming Solid Waste Rules and Regulations that is receiving the waste changes. However, the generator or treater need only notify the Department on an annual basis if such changes occur. Such notification and certification

should be sent to the Department by the end of the calendar year, but no later than December 31. The notification must include the following information: the name and address of the unit regulated under the Wyoming Solid Waste Rules and Regulations that is receiving the waste shipments; the EPA hazardous waste number(s) and treatability group(s) at the initial point of generation; and, the treatment standards applicable to the waste at the initial point of generation. The certification must be signed by an authorized representative and must state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

- ...(ii)(D) (IV) Biological treatment sludge from the treatment of one of the following wastes listed in Section 4(c) <u>of</u> <u>this Chapter</u> <del>of these rules and regulations</del> - organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K156), and wastewaters from the production of carbamates and carbamoyl oximes (EPA Hazardous Waste No. K157).
- ...(ii)(E) (V) Catalyst inert support media separated from one of the following wastes listed in Section 4(c) of this Chapter - spent hydrotreating catalyst (EPA Hazardous Waste No. K171), and spent hydrorefining catalyst (EPA Hazardous Waste No. K172).
- 261.3(d) (iv) Any waste material described in Section 1(c)(iii)
  of this Chapter is not a hazardous waste if it meets the following
  criteria:
- 261.3(d)(1) (A) In the case of any waste material, it does not exhibit any of the characteristics of hazardous waste identified in Section 3 of this Chapter. (However, wastes that exhibit a characteristic at the point of generation may still be subject to the requirements of Chapter 13 of these rules and regulations, even if they no longer exhibit a characteristic at the point of land disposal.)
- 261.3(d)(2) (B) In the case of a waste which is a listed waste under Section 4 of this Chapter, contains a waste listed under Section 4 or is derived from a waste listed in Section 4, it also has been excluded from Section 1(c)(iii) of this Chapter by the Director under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations and designated in Appendix I.
- 261.3(e) (v) [Reserved]
- (vi) Notwithstanding Sections 1(c)(i) through (iv) of this Chapter and provided the debris as defined in Chapter 13 of these rules and regulations does not exhibit a characteristic identified at Section 3 of this Chapter, the following materials are not subject to regulation under this Chapter or Chapter 1, Sections 1 and 3; Chapter 2; Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapter 8; Chapter 9; Chapter 10; Chapter 11; Chapter 12, Sections 1 through 8, 19 and 20; or Chapter 13 of these rules and regulations:
- 261.3(f)(1) (A) Hazardous debris as defined in Chapter 13 of these rules and regulations that has been treated using one of the required extraction or destruction technologies specified in Table 1 of Chapter 13, Section 4(f) of these rules and regulations; persons

claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements; or

- 261.3(f)(2) (B) Debris as defined in Chapter 1, Section 1(f)(i) of these rules and regulations that the Director, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.
- 261.3(g)(1) (vii) A hazardous waste that is listed in Section 4 of this Chapter solely because it exhibits one or more characteristics of ignitability as defined under Section 3(b) of this Chapter, corrosivity as defined under Section 3(c) of this Chapter, or reactivity as defined under Section 3(d) of this Chapter is not a hazardous waste, if the waste no longer exhibits any characteristic of hazardous waste identified in Section 3 of this Chapter.
- <u>261.3(g)(2)</u> (A) The exclusion described in Section 1(c)(vii) of this Chapter also pertains to:
- 261.3(g)(2)(i) (I) Any mixture of a waste material and a hazardous waste listed in Section 4 of this Chapter solely because it exhibits the characteristics of iqnitability, corrosivity, or reactivity as regulated under Section 1(c)(i)(B)(IV) of this Chapter; and
- 261.3(q)(2)(ii) (II) Any waste material generated from treating, storing, or disposing of a hazardous waste listed in Section 4 of this Chapter solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity as regulated under Section 1(c)(iii)(B) of this Chapter.
- <u>261.3(q)(3)</u> (B) Wastes excluded under this Section are subject to Chapter 13 of these rules and regulations (as applicable), even if they no longer exhibit a characteristic at the point of land disposal.</u>
- 261.3(q)(4) (C) Any mixture of a waste material excluded from regulation under Section 1(d)(ii)(G) of this Chapter and a hazardous waste listed in Section 4 of this Chapter solely because it exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity as regulated under Section 1(c)(i)(B)(IV) of this Chapter is not a hazardous waste, if the mixture no longer exhibits any characteristic of hazardous waste identified in Section 3 of this Chapter for which the hazardous waste listed in Section 4 of this Chapter was listed.
- 261.3(h)(1) (viii)Hazardous waste containing radioactive waste is no longer a hazardous waste when it meets the eligibility criteria and conditions of Chapter 12, Section 20 of these rules and regulations ^.
- <u>261.3(h)(2)</u> (A) The exemption described in Section 1(c)(viii) of this Chapter also pertains to:
- <u>261.3(h)(2)(i)</u> (I) Any mixture of a waste material and an eligible radioactive mixed waste; and
- <u>261.3(h)(2)(ii)</u> (II) Any waste material generated from treating, storing, or disposing of an eligible radioactive mixed waste.

```
<u>261.3(h)(3)</u>
```

(B) Waste exempted under Section 1 of this

Chapter must meet the eligibility criteria and specified conditions in Chapter 12, Sections 20(c),20(d),20(l) and 20(m) of these rules and regulations. Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

261.4 (d) EXCLUSIONS.

...(iv)

261.4(a) (i) Materials which are not waste materials. The following materials are not waste materials for the purpose of this Chapter:

261.4(a)(1)(I) (A) Domestic sewage; and

- ...(ii) (I) Any mixture of domestic sewage and other wastes that passes through a sewer system to a publicly-owned treatment works for treatment. "Domestic sewage" means untreated sanitary wastes that pass through a sewer system.
- 261.4(a)(2) (B) Industrial wastewater discharges that are point source discharges subject to regulation under Section 402 of the Clean Water Act, as amended.

[Comment: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.]

261.4(a)(3) (C) Irrigation return flows.

- 261.4(a)(4) (D) Source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, as amended, 42 U.S.C. 2011 et seq.
- 261.4(a)(5) (E) Materials subjected to in-situ mining techniques which are not removed from the ground as part of the extraction process.
- 261.4(a)(6) (F) Pulping liquors (i.e., black liquor) that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless it is accumulated speculatively as defined in Chapter 1, Section 1(f)(i) of these rules and regulations.
- 261.4(a)(7) (G) Spent sulfuric acid used to produce virgin sulfuric acid, unless it is accumulated speculatively as defined in Chapter 1, Section 1(f)(i) of these rules and regulations.
- 261.4(a)(8) (H) Secondary materials that are reclaimed and returned to the original process or processes in which they were generated where they are reused in the production process provided:
- ...(i) (I) Only tank storage is involved, and the entire process through completion of reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;
- ...(ii) (II) Reclamation does not involve controlled flame combustion (such as occurs in boilers, industrial furnaces, or incinerators);
- ...(iii) (III) The secondary materials are never accumulated in such tanks for over twelve months without being reclaimed; and

(IV) The reclaimed material is not used to

2-9

produce a fuel, or used to produce products that are used in a manner constituting disposal. Spent wood preserving solutions that have 261.4(a)(9)(i) (I) been reclaimed and are reused for their original intended purpose; and (I) Wastewaters from the wood preserving ...(ii) process that have been reclaimed and are reused to treat wood. (II) Prior to reuse, the wood preserving ...(iii) wastewaters and spent wood preserving solutions described in Sections 1(d)(i)(I) and 1(d)(i)(I)(I) of this Chapter, so long as they meet all of the following conditions: ...(iii)(A) (1.) The wood preserving wastewaters and spent wood preserving solutions are reused on-site at water borne plants in the production process for their original intended purpose; (2.) Prior to reuse, the wastewaters ...(iii)(B) and spent wood preserving solutions are managed to prevent release to either land or groundwater or both; ...(iii)(C) (3.) Any unit used to manage wastewaters and/or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases; (4.) Any drip pad used to manage the ...(iii)(D) wastewaters and/or spent wood preserving solutions prior to reuse complies with the standards in Chapter 11, Section 24 of these rules and regulations, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and (5.) Prior to operating pursuant to ...(iii)(E) this exclusion, the plant owner or operator submits to the ^ Director a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records for a period of no less than 3 years from the date specified in the notice. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, it may apply to the ^ Director for reinstatement. The ^ Director may reinstate the exclusion upon finding that the plant has returned to compliance with all conditions

261.4(a)(10) (J) EPA hazardous waste nos. K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the Toxicity Characteristic (TC) specified in Section 3(e) of this Chapter when, subsequent to generation, these materials are recycled to coke ovens, to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens or tar recovery or refining processes, or mixed with coal tar.

and that violations are not likely to recur."

261.4(a)(11) (K) Nonwastewater splash condenser dross residue from the treatment of K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.

Oil-bearing hazardous secondary materials and 261,4(a)(12) (L) recovered oil. Recovered oil from petroleum refining, exploration and production, and from transportation incident thereto, which is to be inserted into the petroleum refining process (SIC Code 2911) at or before a point (other than direct insertion into a coker) where contaminants are removed. This exclusion applies to recovered oil stored or transported prior to insertion, except that the oil must not be stored in a manner involving placement on the land, and must not be accumulated speculatively, before being so recycled. Recovered oil is oil that has been reclaimed from secondary materials (such as wastewater) generated from normal petroleum refining, exploration and production, and transportation practices. Recovered oil includes oil that is recovered from refinery wastewater collection and treatment systems, oil recovered from oil and gas drilling operations, and oil recovered from wastes removed from crude oil storage tanks. Recovered oil does not include (among other things) oil-bearing hazardous wastes listed in Section 4 of this Chapter (e.g. K048 K052, F037, F038). However, oil recovered from such wastes may be considered recovered oil. Recovered oil also does not include used oil as defined in Chapter 1, Section 1(f)(i) of these rules and regulations.

(I) Oil-bearing hazardous secondary materials <u>261.4(a)(12)(i)</u> (i.e., sludges, byproducts, or spent materials) that are generated at a petroleum refinery (SIC code 2911) and are inserted into the petroleum refining process (SIC code 2911--including, but not limited to, distillation, catalytic cracking, fractionation, or thermal cracking units (i.e., cokers)) unless the material is placed on the land, or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under Section 1(d)(L)(I) of this Chapter, provided that the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated, or sent directly to another petroleum refinery, and still be excluded under this provision. Except as provided in Section 1(d)(L)(II) of this Chapter, oil-bearing hazardous secondary materials generated elsewhere in the petroleum industry (i.e., from sources other than petroleum refineries) are not excluded under Section 1(d) of this Chapter. Residuals generated from processing or recycling materials excluded under Section 1(d)(L)(I) of this Chapter, where such materials as generated would have otherwise met a listing under Section 4 of this Chapter, are designated as F037 listed wastes when disposed of or intended for disposal.

...(ii) (II) Recovered oil that is recycled in the same manner and with the same conditions as described in Section 1(d)(i)(L)(I) of this Chapter. Recovered oil is oil that has been reclaimed from secondary materials (including wastewater) generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident thereto (SIC codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5172.) Recovered oil does not include oil-bearing hazardous wastes listed in Section 4 of this Chapter; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil as defined in Chapter 1, Section 1(f)(i) of these rules and regulations.

261.4(a)(13) (M) Excluded scrap metal (processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal) being recycled.

Shredded circuit boards being recycled 261.4(a)(14) (N) provided that they are: (I) Stored in containers sufficient to ..(i) prevent a release to the environment prior to recovery; and (II) Free of mercury switches, mercury ...(ii) relays and nickel-cadmium batteries and lithium batteries. Comparable fuels or comparable syngas fuels <u>261.4(a)(16)</u> (O)(i.e., comparable/syngas fuels) that meet the requirements of Section 4(h) of this Chapter. (18) (P) Petrochemical recovered oil from an associated organic chemical manufacturing facility, where the oil is to be inserted into the petroleum refining process (SIC code 2911) 261,4(a)(18) along with normal petroleum refinery process streams, provided: The oil is hazardous only because it ...(i) (T) exhibits the characteristic of ignitability (as defined in Section 3 (b) of this Chapter) and/or toxicity for benzene in Section 3(e) of this Chapter, waste code D018); and (II) The oil generated by the organic chemical manufacturing facility is not placed on the land, or ...(ii) speculatively accumulated before being recycled into the petroleum refining process. An "associated organic chemical manufacturing facility" is a facility where the primary SIC code is 2869, but where operations may also include SIC codes 2821, 2822, and 2865; and is physically co-located with a petroleum refinery; and where the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. "Petrochemical recovered oil" is oil that has been reclaimed from secondary materials (i.e., sludges, byproducts, or spent materials, including wastewater) from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes. (Q) Spent caustic solutions from petroleum 261.4(a)(19) refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid unless the material is placed on the land, or accumulated speculatively as defined in Chapter 1, Section 1(f)(i) of these rules and regulations. (R) Spent materials as defined in Chapter 1 261.4(a)(17) Section 1(f)(i) (other than hazardous wastes listed in Section 4 of this Chapter) generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing or by beneficiation, provided that: The spent material is legitimately (T) ...(i) recycled to recover minerals, acids, cyanide, water or other values; ...(ii) (II) The spent material is not accumulated speculatively; (III) Except as provided in Section 1 ...(iii) (d)(i)(R)(IV) of this Chapter, the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of non-earthen materials providing structural support (except smelter buildings may have partially earthen floors provided the spent material is stored on the

non-earthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be free standing, not be a surface impoundment (as defined in Chapter 1 Section 1(f)(i)), and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate which may be subject to wind dispersal, the owner/operator must operate these units in a manner which controls fugitive dust. Tanks, containers, and buildings must be designed, constructed and operated to prevent significant releases to the environment of these materials.

- ...(iv) (IV) The Director may make a site-specific determination, after public review and comment, that only solid mineral processing spent material may be placed on pads, rather than in tanks, containers, or buildings. Solid mineral processing spent materials do not contain any free liquid. The Director must affirm that pads are designed, constructed and operated to prevent significant releases of the spent material into the environment. Pads must provide the same degree of containment afforded by the non-RCRA tanks, containers and buildings eligible for exclusion.
- ...(iv)(A) if storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, air exposure pathways are: the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway, and the possibility and extent of harm to human and environmental receptors via each exposure pathway.
- ...(iv)(B) (2.) Pads must meet the following minimum standards: be designed of non-earthen material that is compatible with the chemical nature of the mineral processing spent material, capable of withstanding physical stresses associated with placement and removal, have run on/runoff controls, be operated in a manner which controls fugitive dust, and have integrity assurance through inspections and maintenance programs.
- ...(iv)(C) (3.) Before making a determination under Section 1(d)(i)(R)(IV) of this Chapter, the Director must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers, or broadcasting notice over local radio stations.
- (V) The owner or operator provides notice to the Director providing the following information: the types of materials to be recycled; the type and location of the storage units and recycling processes; and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.
- ...(vi) this Chapter, mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for

the conditional exclusion from the definition of waste material.

261.4(b) (ii) Waste materials which are not hazardous wastes. The following waste materials are not hazardous wastes:

261.4(b)(1) (A) Household waste, including household waste that has been collected, transported, stored, treated, disposed, recovered (e.g., refuse-derived fuel) or reused. "Household waste" means any material (including garbage, trash and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds and day-use recreation areas). A resource recovery facility managing municipal waste material shall not be deemed to be treating, storing, disposing of, or otherwise managing hazardous wastes for the purposes of regulation under W.S. 35-11-503(d), if such facility:

...(i)

(I) Receives and burns only

The growing and harvesting of

- ...(i)(A) (1.) Household waste (from single and multiple dwellings, hotels, motels, and other residential sources) and
- $\dots (i)_{(B)}$  (2.) Waste material from commercial or industrial sources that does not contain hazardous waste; and
- ...(ii) (II) Such facility does not accept hazardous wastes and the owner or operator of such facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in such facility.
- 261.4(b)(2) (B) Waste materials generated by any of the following and which are returned to the soils as fertilizers:

(I)

...(i) agricultural crops.

...(ii) (II) The raising of animals, including animal manures.

- (C) Mining overburden returned to the mine site.
- 261.4(b)(4)
   (D) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste, generated primarily from the combustion of coal or other fossil fuels, except as provided by Chapter 12, Section 8(m) of these rules and regulations for facilities that burn or process hazardous waste.
- 261.4(b)(5) (E) Drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas or geothermal energy.

(F) The following chromium wastes:

261.4(b)(6)(i) (I) Wastes which fail the test for the Toxicity Characteristic because chromium is present or are listed in Section 4 of this Chapter due to the presence of chromium, which do not fail the test for the Toxicity Characteristic for any other constituent or are not listed due to the presence of any other constituent, and which do not fail the test for any other characteristic, if it is shown by a waste generator or by waste generators that:

(1.) The chromium in the waste is ...(i)(A) exclusively (or nearly exclusively) trivalent chromium; and (2.) The waste is generated from an ...(i)(B) industrial process which uses trivalent chromium exclusively (or nearly exclusively) and the process does not generate hexavalent chromium; and (3.) The waste is typically and ...(i)(C) frequently managed in non-oxidizing environments. (II) Specific waste which meet the standard ...(ii) in Sections 1(d)(ii)(F)(I)(1.), (2.), and (3.) of this Chapter (so long as they do not fail the test for the toxicity characteristic, for any other constituent, and do not exhibit any other characteristic) are: (1.) Chrome (blue) trimmings generated ...(ii)(A) by the following subcategories of the leather tanning and finishing industry; hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-theblue; and shearling. ...(ii)(B) (2.) Chrome (blue) shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-theblue; and shearling. (3.) Buffing dust generated by the ...(ii)(C) following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-theblue. (4.) Sewer screenings generated by the ...(ii)(D) following subcategories of the leather tanning and finishing industry: hair pulp/crome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-theblue; and shearling. ...(ii)(E) (5.) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling. (6.) Wastewater treatment sludges ...(ii)(F) generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrometan/retan/wet finish; and through-the-blue. (7.) Waste scrap leather from the ...(ii)(G) leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries. (8.) Wastewater treatment sludges from ...(Ii)(H) the production of TiO, pigment using chromium-bearing ores by the chloride process.

261.4(b)(7) (G) Waste material from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock and overburden from the mining of uranium ore), except as provided by Chapter 12, Section 8(m) of these rules and regulations for facilities that burn or process hazardous waste.

For purposes of Section 1(d)(ii)(G) of (I) ...(i) this Chapter, beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water and/or carbon dioxide; roasting, autoclaving, and/or chlorination in preparation for leaching (except where the roasting (and/or autoclaving and/or chlorination)/leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching. (II) For the purpose of Section 1(d)(ii)(G) of this Chapter, waste material from the processing of ores and ...(ii) minerals includes only the following wastes:  $(\pm 1.)$  Slag from primary copper ...(ii)(A) processing; (<del>II</del>2.) Slag from primary lead ...(ii)(B processing; ...(ii)(C) (III3.)Red and brown muds from bauxite refining; (<del>IV</del>4.) Phosphogypsum from phosphoric ...(ii)(D) acid production; ...(ii)(E)  $(\underbrace{\forall 5.})$  Slag from elemental phosphorus production; ...(ii)(F) (<del>VI</del>6.) Gasifier ash from coal qasification; ...(ii)(G) (VII<u>7.</u>)Process wastewater from coal gasification; (VIII<u>8.</u>)Calcium sulfate wastewater ...(ii)(H) treatment plant sludge from primary copper processing; (<del>IX</del>9.) Slag tailings from primary ...(ii)(I) copper processing; (X10.) Fluorogypsum from hydrofluoric ...(ii)(J) acid production; ...(ii)(K) (XI11.)Process wastewater from hydrofluoric acid production; (XII<u>12.</u>) Air pollution control ...(ii)(L) dust/sludge from iron blast furnaces; ...(ii)(M) (XIII13.) Iron blast furnace slag; ...(ii)(N) (XIV14.) Treated residue from roasting/leaching of chrome ore; (XV15.)Process wastewater from primary ...(ii)(0) magnesium processing by the anhydrous process; (XVI<u>16.</u>)Process wastewater from ...(ii)(P) phosphoric acid production;

2-16

hearth furnace air pollution control dust/sludge from carbon steel production; ...(ii)(R) (XVIII<u>18.</u>)Basic oxygen furnace and open hearth furnace slag from carbon steel production; (XIX19.)Chloride process waste solids ...(ii)(S) from titanium tetrachloride production; ...(ii)(T) (XX20.)Slag from primary zinc processing. ...(iii) (III) A residue derived from co-processing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under Section 1(d)(ii) of this Chapter if the owner or operator: (1.) Processes at least 50 percent by ...(iii)(A) weight normal beneficiation raw materials or normal mineral processing raw materials; and, (2.) Legitimately reclaims the ...(iii)(B) secondary mineral processing materials. (H) Cement kiln dust waste, except as provided by 261.4(b)(8) Chapter 12, Section 8(m) of these rules and regulations for facilities that burn or process hazardous waste. 261.4(b)(9) Waste material which consists of discarded (I) arsenical-treated wood or wood products which fails the test for the Toxicity Characteristic for hazardous waste codes D004 through D017 and which is not a hazardous waste for any other reason if the waste is generated by persons who utilize the arsenical-treated wood and wood product for these materials' intended end use. Petroleum-contaminated media and debris that 261.4(b)(10) (J) fail the test for the toxicity characteristic of Section 3(e) of this Chapter (Hazardous Waste Codes D018 through D043 only) and are subject to the corrective action regulations under 40 CFR Part 280. (K) Reserved. ^ 261.4(b)(11) 261,4(b)(12) (L) Used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air conditioning systems, mobile refrigeration, and commercial and industrial air conditioning and refrigeration systems that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use. Non-terne plated used oil filters that are (M) 261,4(b)(13) not mixed with wastes listed in Section 4 of this Chapter if these oil filters have been gravity hot-drained using one of the following methods: Puncturing the filter anti-drain back (I) ...(i) valve or the filter dome end and hot-draining; (II) Hot-draining and crushing; ...(ii) ...(iii) (III) Dismantling and hot-draining; or

...(ii)(Q)

(XVII17.)Basic oxygen furnace and open

...(iv) (IV) Any other equivalent hot-draining

method that will remove used oil.

261.4(b)(14) (N) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.

- <u>261.4(b)(15)</u> (O) Leachate or gas condensate collected from <u>landfills where certain waste materials have been disposed, provided</u> that:
- (I) The waste materials disposed would meet one or more of the listing descriptions for Hazardous Waste Codes K169, K170, K171, and K172 if these wastes had been generated after the effective date of the listing (February 8, 1999);
- ... (ii) (II) The waste materials described in Section 1(d)(ii)(O)(I) of this Chapter were disposed prior to the effective date of the listing;
- ... (iii) (III) The leachate or qas condensate do not exhibit any characteristic of hazardous waste nor are derived from any other listed hazardous waste;
- ... (iv) (IV) Discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a POTW by truck, rail, or dedicated pipe, is subject to regulation under Sections 307(b) or 402 of the Clean Water Act.
- (V) After February 13, 2001, leachate or gas condensate **shall** ^ no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation (e.g., shutdown of wastewater treatment system), provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed in compliance with the conditions of this paragraph after the emergency ends.
- (iii) Hazardous wastes which are exempted from certain regulations. A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit or an associated non-waste-treatmentmanufacturing unit, is not subject to regulation under Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; and Chapter 13 of these rules and regulations or to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing, or for storage or transportation of product or raw materials.

| 261.4(d) | (iv)    | Samples. |
|----------|---------|----------|
| 101.1(u) | ( - • / | 000000   |

- 261.4(d)(1) (A) Except as provided in Section 1(d)(iv)(B) of this Chapter, a sample of waste material or a sample of water, soil, or air, which is collected for the sole purpose of testing to determine its characteristics or composition, is not subject to any requirements of Chapter 1, Sections 1(h)-1(j); Chapters 2 through 11; Chapter 12, Sections 1 through 89, 19 and 20; or Chapter 13 of these rules and regulations or to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations, when:
- ...(i) (I) The sample is being transported to a laboratory for the purpose of testing; or

(II) The sample is being transported back to ...(ii) the sample collector after testing; or (III) The sample is being stored by the ...(iii) sample collector before transport to a laboratory for testing; or (IV) The sample is being stored in a ...(iv) laboratory before testing; or The sample is being stored in a (V) ...(v) laboratory after testing but before it is returned to the sample collector; or (VI) The sample is being stored temporarily ...(vi) in the laboratory after testing for a specific purpose (for example, until conclusion of a court case or enforcement action where further testing of the sample may be necessary). In order to qualify for the exemption in 261.4(d)(2) (B) Sections 1(d)(iv)(A)(I) and 1(d)(iv)(A)(II) of this Chapter, a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector must: ...(i) (I) Comply with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements; or (II) Comply with the following requirements ...(ii) if the sample collector determines that DOT, USPS, or other shipping requirements do not apply to the shipment of the sample: (1.) Assure that the following ...(ii)(A) information accompanies the sample: The sample collector's ...(ii)(A)(1) a. name, mailing address, and telephone number; b. The laboratory's name, ...(ii)(A)(2) mailing address, and telephone number; ...(ii)(A)(3) c. The quantity of the sample; d. The date of shipment; and ...(ii)(A)(4) A description of the ...(ii)(A)(5) е. sample. (2.) Package the sample so that it ...(ii)(B) does not leak, spill, or vaporize from its packaging. 261.4(d)(3) This exemption does not apply if the (C) laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in Section 1(d)(iv)(A) of this Chapter. Treatability Study Samples. 261.4(e) (v) Except as provided in Section 1(d)(v)(B) of (A) 261.4(e)(1) this Chapter, persons who generate or collect samples for the purpose of conducting treatability studies as defined in Chapter 1, Section 1(f)(i) of these rules and regulations, are not subject to any requirement of Chapter 2 and Chapters 8 and 9 of these rules and regulations or to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations, nor are such samples included in

the quantity determinations of Section 1(e) of this Chapter and

Chapter 8, Section 3(e)(iv) of these rules and regulations when: (I) The sample is being collected and ...(i) prepared for transportation by the generator or sample collector; or (II) The sample is being accumulated or ...(ii) stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or (III) The sample is being transported to the ...(iii) laboratory or testing facility for the purpose of conducting a treatability study. The exemption in Section 1(d)(v)(A) of this 261.4(e)(2) (B) Chapter is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies provided that: (I) The generator or sample collector uses ...(i) (in "treatability studies") no more than 10,000 kg of media contaminated with non-acute hazardous waste, 1000 kg of non-acute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream; and (II) The mass of each sample shipment does (ii) not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with non-acute hazardous waste, or may include 2500 kg of media contaminated with acute hazardous waste, 1000 kg of hazardous waste, and 1 kg of acute hazardous waste; and (III) The sample must be packaged so that it ...(iii) will not leak, spill, or vaporize from its packaging during shipment and the requirements of Section 1(d)(v)(B)(III)(I.) or (2.) of this Chapter are met. (1.) The transportation of each sample ...(iii)(A) shipment complies with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements; (2.) If the DOT, USPS, or other ...(iii)(B) shipping requirements do not apply to the shipment of the sample, the following information must accompany the sample: The name, mailing address, ...(iii)(B) a. and telephone number of the originator of the sample; The name, address, and ...(iii)(B)(2) b. telephone number of the facility that will perform the treatability study; The quantity of the sample; ...(iii)(B)(3) c. d. The date of shipment; and ...(iii)(B)(4) A description of the ...(iii)(B)(5) e. sample, including its EPA hazardous waste number. (IV) The sample is shipped to a laboratory ...(iv) or testing facility which is exempt under Section 1(d)(vi) of this Chapter or has an appropriate State hazardous waste management facility permit or interim status under Chapter 11 of these rules and regulations.

The generator or sample collector (V) ...(v) maintains the following records for a period ending 3 years after completion of the treatability study: (1.) Copies of the shipping documents; ...(v)(A) (2.) A copy of the contract with the ...(v)(B) facility conducting the treatability study; (3.) Documentation showing: ...(v)(C) The amount of waste shipped ...(v)(C)(1) а. under this exemption; The name, address, and EPA b. ...(v)(C)(2) identification number of the laboratory or testing facility that received the waste; ...(v)(C)(3) c. The date the shipment was made; and d. Whether or not unused ...(v)(C)(4) samples and residues were returned to the generator. (VI) The generator reports the information ...(vi)

kg of media contaminated with acute hazardous waste and 1 kg of acute

required under Section 1(d)(v)(B)(V)(3.) of this Chapter in its

...(i) (I) In response to requests for authorization to ship, store and conduct treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process (e.g., Batch versus continuous), size of the unit undergoing testing (particularly in relation to scale-up considerations), the time/quantity of material required to reach steady state operating conditions, or test design considerations such as mass balance calculations.

hazardous waste:

- ...(ii) (II) In response to requests for authorization to ship, store and conduct treatability studies on additional quantities after initiation or completion of initial treatability studies, when: there has been an equipment or mechanical failure during the conduct of a treatability study; there is a need to verify the results of a previously conducted treatability study; there is a need to study and analyze alternative techniques within a previously evaluated treatment process; or there is a need to do further evaluation of an ongoing treatability study to determine final specifications for treatment.
- ...(iii) (III) The additional quantities and timeframes allowed in Sections 1(d)(v)(C)(I) and (II) of this Chapter are subject to all the provisions in Sections 1(d)(v)(A) and 1(d)(v)(B)(III) through (VI) of this Chapter. The generator or sample collector must apply to the Director in the region where the

...(iii)(A) (1.) The reason why the generator or sample collector requires additional time or quantity of sample for treatability study evaluation and the additional time or quantity needed;

sample is collected and provide in writing the following information:

...(iii)(B) (2.) Documentation accounting for all samples of hazardous waste from the waste stream which have been sent for or undergone treatability studies including the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results on each treatability study;

- ...(iii)(c) (3.) A description of the technical modifications or change in specifications which will be evaluated and the expected results;
- ...(iii)(D) (4.) If such further study is being required due to equipment or mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and

 $\dots(\text{iii})(E)$  (5.) Such other information that the Director considers necessary.

- 61.4(f) (vi) Samples undergoing treatability studies at laboratories and testing facilities. Samples undergoing treatability studies and the laboratory or testing facility conducting such treatability studies (to the extent such facilities are not otherwise subject to W.S. 35-11-503(d) requirements) are not subject to any requirement of this Chapter; Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, or to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations provided that the conditions of Sections 1(d)(vi)(A) through (K) of this Chapter are met. A mobile treatment unit (MTU) may qualify as a testing facility subject to Sections 1(d)(vi)(A) through (K) of this Chapter. Where a group of MTUs are located at the same site, the limitations specified in Sections 1(d)(vi)(A) through (K) of this Chapter apply to the entire group of MTUs collectively as if the group were one MTU.
- 261.4(f)(1) (A) No less than 45 days before conducting treatability studies, the facility notifies the Director, in writing that it intends to conduct treatability studies under Section 1(d)(vi) of this Chapter.

(B) The laboratory or testing facility conducting the treatability study has an EPA identification number.

- 261.4(f)(3) (C) No more than a total of 10,000 kg of "as received" media contaminated with non-acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste or 250 kg of other "as received" hazardous waste is subject to initiation of treatment in all treatability studies in any single day. "As received" waste refers to the waste as received in the shipment from the generator or sample collector.
- 261.4(f)(4) (D) The quantity of "as received" hazardous waste stored at the facility for the purpose of evaluation in treatability studies does not exceed 10,000 kg, the total of which can include

10,000 kg of media contaminated with non-acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste, 1000 kg of nonacute hazardous wastes other than contaminated media, and 1 kg of acute hazardous waste. This quantity limitation does not include treatment materials (including nonhazardous solid waste) added to "as received" hazardous waste.

- 261.4(f)(5) (E) No more than 90 days have elapsed since the treatability study for the sample was completed, or no more than one year (two years for treatability studies involving bioremediation) have elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date first occurs. Up to 500 kg of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial receipt. Quantities of materials archived are counted against the total storage limit for the facility.
- 261.4(f)(6) (F) The treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste.
- 261.4(f)(7) (G) The facility maintains records for 3 years following completion of each study that show compliance with the treatment rate limits and the storage time and quantity limits. The following specific information must be included for each treatability study conducted:
- ...(i) (I) The name, address, and EPA identification number of the generator or sample collector of each waste sample;
- ...(ii) (II) The date the shipment was received;
- ...(iii) (III) The quantity of waste accepted;
- ...(iv) (IV) The quantity of "as received" waste in storage each day;
- ...(v) (V) The date the treatment study was initiated and the amount of "as received" waste introduced to treatment each day;
- ...(vi) (VI) The date the treatability study was concluded;
- ...(vii) (VII) The date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the EPA identification number.
- 261.4(f)(8) (H) The facility keeps, on-site, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three (3) years from the completion date of each treatability study.
- 261.4(f)(9) (I) The facility prepares and submits a report to the DEQ Director, by March 15 of each year that estimates the number of studies and the amount of waste expected to be used in treatability studies during the current year, and includes the following information for the previous calendar year:
- ...(i) (I) The name, address, and EPA identification number of the facility conducting the treatability

studies;

...(ii) (II) The types (by process) of treatability
studies conducted;
(III) The names and addresses of persons for
whom studies have been conducted (including their EPA identification
numbers);
(IV) The total quantity of waste in storage
each day;
(V) The quantity and types of waste
subjected to treatability studies;

...(vi) (VI) When each treatability study was conducted;

...(vii) (VII) The final disposition of residues and unused sample from each treatability study.

- 261.4(f)(10) (J) The facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under Section 1(c) of this Chapter and, if so, are subject to Chapter 1, Sections 1(h)-1(j); Chapter 2; Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapters 8 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, unless the residues and unused samples are returned to the sample originator under the Section 1(d)(v) of this Chapter exemption.
- 261.4(f)(11) (K) The facility notifies the DEQ Director, by letter when the facility is no longer planning to conduct any treatability studies at the site.

261.4(g) (vii) Dredged material that is not a hazardous waste. Dredged material that is subject to the requirements of a permit that has been issued under 404 of the Federal Water Pollution Control Act (33 U.S.C.1344) or Section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413) is not a hazardous waste. For Section 1(c)(vii) of this Chapter, the following definitions apply:

<u>261.4(g)(1)</u> (A) The term dredged material has the same meaning as defined in 40 CFR 232.2;

<u>261.4(g)(2)</u> (B) The term permit means:

... (i) (I) A permit issued by the U.S. Army Corps of Engineers (Corps) or an approved State under Section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344);

- ... (ii) (II) A permit issued by the Corps under Section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413); or
- ... (iii) (III) In the case of Corps civil works projects, the administrative equivalent of the permits referred to in Section 1(d)(vii)(B)(I) and (II) of this Chapter, as provided for in Corps regulations (for example, see 33 CFR 336.1, 336.2, and 337.6).
- 261.5 (e) SPECIAL REQUIREMENTS FOR HAZARDOUS WASTE GENERATED BY CONDITIONALLY EXEMPT SMALL QUANTITY GENERATORS.
- 261.5(a) (i) A generator is a conditionally exempt small

quantity generator in a calendar month if he or she generates no more than 100 kilograms of hazardous waste in that month.

- (ii) Except for those wastes identified in Sections 1(e)(v), 1(e)(vi), 1(e)(vii) and 1(e)(x) of this Chapter, a conditionally exempt small quantity generator's hazardous wastes are not subject to regulation under Chapters 3 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, and the notification requirements of Chapter 1, Section 1(h) of these rules and regulations, provided the generator complies with the requirements of Sections 1(e)(vi), 1(e)(vii), and 1(e)(x) of this Chapter.
- 261.5(c) (iii) When making the quantity determinations of Chapter 2 and Chapter 8 of these rules and regulations, the generator must include all hazardous waste that it generates, except hazardous waste that:
- 261.5(c)(1) (A) Is exempt from regulation under Section 1(d)(iii) through (vi), Section 1(f)(i)(C), Section 1(g)(i)(A), or Section 1(h) of this Chapter; or
- 261.5(c)(2) (B) Is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities as defined in Chapter 1, Section 1(f)(i) of these rules and regulations; or
- 261.5(c)(3) (C) Is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under Section 1(f)(iii)(B) of this Chapter; or
- 261.5(c)(4) (D) Is used oil managed under the requirements of Section 1(f)(i)(D) of this Chapter and Chapter 12, Sections 9 through 17 of these rules and regulations; or
- 261.5(c)(5) (E) Is spent lead-acid batteries managed under the requirements of Chapter 12, Section 7 of these rules and regulations, or used batteries (or used battery cells) returned to a battery manufacturer for regeneration; or
- 261.5(c)(6) (F) Is universal waste managed under Section 1(i)
  of this Chapter and Chapter 14 of these rules and regulations.
- 261.5(d) (iv) In determining the quantity of hazardous waste generated, a generator need not include:
- 261.5(d)(1) (A) Hazardous waste when it is removed from onsite storage; or
- 261.5(d)(2) (B) Hazardous waste produced by on-site treatment (including reclamation) of his or her hazardous waste, so long as the hazardous waste that is treated was counted once; or
- 261.5(d)(3) (C) Spent materials that are generated, reclaimed, and subsequently reused on-site, so long as such spent materials have been counted once.
- 261.5(e) (v) If a generator generates acute hazardous waste in a calendar month in quantities greater than set forth below, all quantities of that acute hazardous waste are subject to full regulation under Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, and the notification requirements of Chapter 1, Section 1(h) of these rules and regulations:

(A) A total of one kilogram of acute hazardous wastes listed in Section 4(b), 4(c), or 4(d)(v) of this Chapter.

(B) A total of 100 kilograms of any residue or contaminated soil, waste, or other debris resulting from the clean-up of a spill, into or on any land or water, of any acute hazardous wastes listed in Section 4(b), 4(c), or 4(d)(v) of this Chapter.

[Comment: "Full regulation" means those regulations applicable to generators of greater than 1,000 kg of non-acutely hazardous waste in a calendar month.]

- 261.5(f) (vi) In order for acute hazardous wastes generated by a generator of acute hazardous wastes in quantities equal to or less than those set forth in Section 1(e)(v)(A) or (B) of this Chapter to be excluded from full regulation under Section 1(e) of this Chapter, the generator must comply with the following requirements:
- 261.5(f)(1) (A) Chapter 8, Section 1(b) of these rules and regulations;
- (B) The generator may accumulate acute hazardous waste on-site. If he or she accumulates at any time acute hazardous wastes in quantities greater than those set forth in Section 1(e)(v)(A) or (B) of this Chapter, all of those accumulated wastes are subject to regulation under Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13, of these rules and regulations, and the applicable notification requirements of Chapter 1, Section 1(h) of these rules and regulations. The time period of Chapter 8, Section 3(e)(i) of these rules and regulations, for accumulation of wastes on-site, begins when the accumulated wastes exceed the applicable exclusion limit;
- 261.5(f)(3) (C) A conditionally exempt small quantity
  generator may either treat or dispose of his or her acute hazardous
  waste in an on-site facility or ensure delivery to an off-site
  treatment, storage or disposal facility, either of which, if located
  in the U.S., is:
- ...(i) (I) Permitted under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 6, Section 2; Chapter 7; and Chapter 11, Section 2 of these rules and regulations or 40 CFR Part 270;
- ...(ii) (II) In interim status under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; and Chapter 11 of these rules and regulations or 40 CFR Parts 270 and 265;
- ...(iii) (III) Authorized to manage hazardous waste by <u>a State with a hazardous waste management program approved under 40</u> <u>CFR Part 271</u> the State of Wyoming;
- ...(iv) (IV) Permitted, licensed, or registered by <u>a</u> the State of Wyoming to manage municipal solid waste and, if managed in a municipal solid waste landfill is subject to Chapter 2 of the Solid Waste Rules and Regulations <u>40 CFR Part 258</u>;
- ...(v) (V) Permitted, licensed, or registered by <u>a</u> the State of Wyoming to manage non-municipal non-hazardous waste and, if managed in a non-municipal, non-hazardous waste disposal unit after January 1, 1998, is subject to the requirements in 40 CFR Sections 257.5 through 257.3<u>0</u>; or

(VI) A facility which:

...(vi)(A) (1.) Beneficially uses or reuses, or legitimately recycles or reclaims its waste; or

...(vi)(B) (2.) Treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation; or

...(vii) (VII) For universal waste managed under Chapter 14 of these rules and regulations <u>or 40 CFR Part 273</u>, a universal waste handler or destination facility subject to the requirements of Chapter 14 <u>of these rules and regulations or 40 CFR</u> <u>273 or a State universal waste program approved under 40 CFR Part</u> 271.

- 261.5(g) (vii) In order for hazardous waste generated by a conditionally exempt small quantity generator in quantities of less than 100 kilograms of hazardous waste during a calendar month to be excluded from full regulation under Section 1(e) of this Chapter, the generator must comply with the following requirements:
- 261.5(g)(1) (A) Chapter 8, Section 1(b) of these rules and regulations;
- (B) The conditionally exempt small quantity generator may accumulate hazardous waste on-site. If he or she accumulates at any time more than a total of 1000 kilograms of his or her hazardous wastes, all of those accumulated wastes are subject to regulation under the special provisions of Chapter 8 of these rules and regulations applicable to generators of between 100 kg and 1000 kg of hazardous waste in a calendar month as well as the requirements of Chapter 1, Sections 1(h)-1(j); Chapters 3 through 7; Chapters 9 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, and the applicable notification requirements of Chapter 1, Section 1(h) of these rules and regulations. The time period of Chapter 8, Section 3(e)(iv) of these rules and regulations for accumulation of wastes on-site begins for a conditionally exempt small quantity generator when the accumulated wastes exceed 1000 kilograms;
- 261.5(g)(3) (C) A conditionally exempt small quantity generator may either treat or dispose of his or her hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage or disposal facility, either of which, if located in the U.S., is:
- ...(i) (I) Permitted under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 6, Section 2; Chapter 7; and Chapter 11, Section 2 of these rules and regulations or 40 CFR Part 270;
- ...(ii) (II) In interim status under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; and Chapter 11 of these rules and regulations or 40 CFR Parts 270 and 265;
- ...(iii) (III) Authorized to manage hazardous waste by <u>a State with a hazardous waste management program approved under 40</u> <u>CFR Part 271</u> the State of Wyoming;
- ...(iv) (IV) Permitted, licensed, or registered by a the State of Wyoming to manage municipal solid waste and, if managed in a municipal solid waste landfill is subject to Chapter 2 of the Solid Waste Rules and Regulations 40 CFR Part 258;

...(vi)

...(v) (V) Permitted, licensed. or registered by <u>a</u> the State of Wyoming to manage non-municipal non-hazardous waste and, if managed in a non-municipal non-hazardous waste disposal unit after January 1, 1998, is subject to the requirements of 40 CFR Sections 257.5 through 257.30; or

(VI) A facility which:

...(vi)(A) (1.) Beneficially uses or reuses, or legitimately recycles or reclaims its waste; or

...(vi)

 $\dots$  (v) (B) (2.) Treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation; or

- ...(vii) (VII) For universal waste managed under Chapter 14 of these rules and regulations <u>or 40 CFR Part 273</u>, a universal waste handler or destination facility subject to the requirements of Chapter 14 <u>of these rules and regulations or 40 CFR</u> <u>273 or a State universal waste program approved under 40 CFR Part</u> <u>271</u>.
- 261.5(h) (viii)Hazardous waste subject to the reduced requirements of Section 1(e) of this Chapter may be mixed with non-hazardous waste and remain subject to these reduced requirements even though the resultant mixture exceeds the quantity limitations identified in Section 1(e) of this Chapter, unless the mixture meets any of the characteristics of hazardous waste identified in Section 3 of this Chapter.
- 261.5(i) (ix) If any person mixes a waste material with a hazardous waste that exceeds a quantity exclusion level of Section 1(e) of this Chapter, the mixture is subject to full regulation.
- 261.5(j) (x) If a conditionally exempt small quantity generator's wastes are mixed with used oil, the mixture is subject to regulation under Chapter 12, Sections 9 through 17 of these rules and regulations if it is destined to be burned for energy recovery. Any material produced from such a mixture by processing, blending, or other treatment is also so regulated if it is destined to be burned for energy recovery.
- 261.6 (f) REQUIREMENTS FOR RECYCLABLE MATERIALS.

#### (i) **Requirements**

- 261.6(a)(1) (A) Hazardous wastes that are recycled are subject to the requirements for generators, transporters, and storage facilities of Sections 1(f)(ii) and (iii) of this Chapter, except for the materials listed in Sections 1(f)(i)(B) and 1(f)(i)(C) of this Chapter. Hazardous wastes that are recycled will be known as "recyclable materials."
- (B) The following recyclable materials are not subject to the requirements of Section 1(f) of this Chapter but are regulated under Chapter 12, Section 3 and Sections 6 through 8 of these rules and regulations and all applicable provisions in Chapter 1, Sections 1(h)-1(j); Chapter 3; Chapter 4; Chapter 6; Chapter 7; and Chapter 11, Section 2 of these rules and regulations:
- ...(i) (I) Recyclable materials used in a manner constituting disposal (Chapter 12, Section 3 of these rules and regulations);
- ...(ii) (II) Hazardous wastes burned for energy recovery in boilers and industrial furnaces that are not regulated

under Chapter 10, Section 14 or Chapter 11, Section 16 of these rules and regulations (Chapter 12, Section 8 of these rules and regulations);

- ...(iii) (III) Recyclable materials from which precious metals are reclaimed (Chapter 12, Section 6 of these rules and regulations);
- ...(iv) (IV) Spent lead-acid batteries that are being reclaimed (Chapter 12, Section 7 of these rules and regulations).
- 261.6(a)(3) (C) The following recyclable materials are not subject to regulation under Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; Chapter 12, Sections 1 through 8, 19 and 20; or Chapter 13 of these rules and regulations, and are not subject to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations:
- ...(i) (I) Industrial ethyl alcohol that is reclaimed except that, unless provided otherwise in an international agreement as specified in Chapter 8, Section 5(i) of these rules and regulations:
- ...(i)(A) (1.) A person initiating a shipment for reclamation in a foreign country, and any intermediary arranging for the shipment, must comply with the requirements applicable to a primary exporter in Chapter 8, Sections 5(d), 5(g)(i)(A)-(D), 5(g)(i)(F), 5(g)(ii) and 5(h) of these rules and regulations, export such materials only upon consent of the receiving country and in conformance with the EPA acknowledgment of consent as defined in Chapter 8, Section 5 of these rules and regulations, and provide a copy of the EPA acknowledgment of consent to the shipment to the transporter transporting the shipment for export;
- ...(i)(B) (2.) Transporters transporting a shipment for export may not accept a shipment if he or she knows the shipment does not conform to the EPA acknowledgment of consent, must ensure that a copy of the EPA acknowledgment of consent accompanies the shipment and must ensure that it is delivered to the facility designated by the person initiating the shipment.
- ...(ii) (II) Scrap metal + that is not excluded under Section 1(d)(i)(M) of this Chapter;
- ...(iii) (III) Fuels produced from the refining of oil-bearing hazardous wastes along with normal process streams at a petroleum refining facility if such wastes result from normal petroleum refining, production, and transportation practices; this exemption does not apply to fuels produced from oil recovered from oil-bearing hazardous waste, where such recovered oil is already excluded under Section 1(d)(i)(l) of this Chapter.

#### ...(iv) (IV) The following fuels:

...(iv)(A) (1.) Hazardous waste fuel produced from oil-bearing hazardous wastes from petroleum refining, production, or transportation practices, or produced from oil reclaimed from such hazardous wastes, where such hazardous wastes are reintroduced into a process that does not use distillation or does not produce products from crude oil so long as the resulting fuel meets the used oil specification under Chapter 12, Section 10(b) of these rules and regulations and so long as no other hazardous wastes are used to produce the hazardous waste fuel; ...(iv)(B) (2.) Hazardous waste fuel produced from oil-bearing hazardous waste from petroleum refining production, and transportation practices, where such hazardous wastes are reintroduced into a refining process after a point at which contaminants are removed, so long as the fuel meets the used oil fuel specification under Chapter 12, Section 10(b) of these rules and regulations; and

...(iv)(c) (3.) Oil reclaimed from oil-bearing hazardous wastes from petroleum refining, production, and transportation practices, which reclaimed oil is burned as a fuel without reintroduction to a refining process, so long as the reclaimed oil meets the used oil fuel specification under Chapter 12, Section 10(b) of these rules and regulations; and.

...(v) (V) Petroleum coke produced from petroleum refinery hazardous wastes containing oil by the same person who generated the waste, unless the resulting coke product exceeds one or more of the characteristics of hazardous waste in Chapter 2, Section 3 of these rules and regulations.

- (D) Used oil that is recycled and is also a hazardous waste solely because it exhibits a hazardous characteristic is not subject to the requirements of Chapter 1, Sections 1(a) through 1(g) and Section 3; Chapter 2; Chapter 5; Chapters 8 through 10; Chapter 11, Section 1 and Sections 4 through 3±2; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations, but is regulated under Chapter 12, Sections 9 through 17 of these rules and regulations. Used oil that is recycled includes any used oil which is reused, following its original use, for any purpose (including the purpose for which the oil was originally used). Such term includes, but is not limited to, oil which is rerefined, reclaimed, burned for energy recovery, or reprocessed.
- 261.6(a)(5) (E) Hazardous waste that is exported to or imported from designated member countries of the Organization for Economic Cooperation and Development (OECD) (as defined in Chapter 1, Section 1(f)(i) of these rules and regulations for purpose of recovery is subject to the requirements of Chapter 8, Section 8 of these rules and regulations subpart H of 40 CFR Part 262 (see Chapter 8, Section 1(a)(iv) of these rules and regulations), if it is subject to either the manifesting requirements of Chapter 8 of these rules and regulations, or to the universal waste management standards of Chapter 14 of these rules and regulations.
- 261.6(b) (ii) Generators and transporters of recyclable materials are subject to the applicable requirements of Chapters 8 and 9 of these rules and regulations and the notification requirements under Chapter 1, Section 1(h) of these rules and regulations, except as provided in Section 1(f)(i) of this Chapter.

261.6(c)(1) (iii) Owners and operators of facilities that:

261.6(c)(1) (A) Store recyclable materials before they are recycled are regulated under all applicable provisions of Chapter 10, Sections 1 through 11, 26, 27 and 28; Chapter 11, Section 1 and Sections 4 through 13, 28, 29 and 30; and Chapter 5 of these rules and regulations, and under Chapter 3; Chapter 4; Chapter 6; Chapter 7; Chapter 11, Section 2; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations and the notification requirements under Chapter 1, Section 1(h) of these rules and regulations, except as provided in Section 1(f)(i) of this Chapter. (The recycling process itself is exempt from regulation except as provided in Section 1(f)(iv) of this Chapter.)

- 261.6(c)(2) (B) Owners or operators of facilities that recycle recyclable materials without storing them before they are recycled are subject to the following requirements, except as provided in Section 1(f)(i) of this Chapter:
- ...(i) (I) Notification requirements under Chapter 1, Section 1(h) of these rules and regulations;
- ...(ii) (II) Chapter 11, Sections 7(b) and 7(c) of these rules and regulations (dealing with the use of the manifest and manifest discrepancies) of this Chapter.

...(III) Section 1(f)(iv) of this Chapter.

261.6(d) (iv) Owners or operators of facilities subject to State hazardous waste management facility permitting requirements with hazardous waste management units that recycle hazardous wastes are subject to the requirements of Chapter 10, Sections 26 and 27 or Chapter 11, Sections 28 and 29 of these rules and regulations.

(v) The Director may determine that a proposed hazardous waste recycling activity constitutes sham recycling. Hazardous waste treatment or disposal activity determined to be sham recycling shall be subject to the permitting requirements under these rules and regulations. The Director shall consider the following criteria in making this determination.

(A) The secondary material contains a hazardous constituent defined in Chapter 2, Appendix H of these rules and regulations not found in the analogous raw material or at greater levels than the analogous raw material;

(B) The secondary material exhibits a hazardous characteristic that the analogous raw material does not;

(C) The secondary material is being used in excess of the amount of raw material that would otherwise be used;

(D) The recycling process (including storage) is likely to release hazardous constituents or otherwise pose risks to human health and/or the environment that are different from or greater than the risks posed by the processing of an analogous raw material or product;

(E) The secondary material to be recycled does not have value as a raw material or product and there is not guaranteed market for the end product;

(F) The secondary material is not handled in a manner consistent with the raw material or product it replaces;

(G) The toxic constituent in the secondary material is useful in the production of the product or the product itself;

(H) Economics of the recycling process; or

(I) Other factors the director deems relevant.

(vi) No process in which liquids, solids, sludges, or dissolved constituents are collected or separated in process units for recycling, recovery or reuse including the recovery of energy, within a continuous or batch manufacturing or refining process shall be considered a sham recycling activity under Section 1(f)(v) of this Chapter.

#### (g) RESIDUES OF HAZARDOUS WASTE IN EMPTY CONTAINERS.

#### (i) Residues:

261 7

261.7(a)(1) (A) Any hazardous waste remaining in either (i) an empty container or, in an inner liner removed from an empty container, as defined in Section 1(g)(ii) of this Chapter, is not subject to regulation under this Chapter; Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; or Chapter 13 of these rules and regulations or to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations.

261.7(a)(2) (B) Any hazardous waste in either a container that is not empty or, in an inner liner removed from a container that is not empty, as defined in Section 1(g)(ii) of this Chapter, is subject to regulation under this Chapter; Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; and Chapter 13 of these rules and regulations and to the notification requirements of Chapter 1, Section 1(h) of these rules and regulations.

(ii) Empty containers:

- 261.7(b)(1) (A) A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acute hazardous waste listed in Section 4(b), 4(c), or 4(d)(v) of this Chapter is empty if:
- ...(i) (I) All wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, e.g., pouring, pumping, and aspirating, and
- (II) No more than 2.5 centimeters (one inch) of residue remain on the bottom of the container or inner liner, or
- ...(iii)(A) (III) No more than 3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is less than or equal to 110 gallons in size, or
- ...(iii)(B) (IV) No more than 0.3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is greater than 110 gallons in size.
- 261.7(b)(2) (B) A container that has held a hazardous waste that is a compressed gas is empty when the pressure in the container approaches atmospheric.
- 261.7(b)(3) (C) A container or an inner liner removed from a container that has held an acute hazardous waste listed in Section 4(b), 4(c) or 4(d)(v) of this Chapter is empty if:
- ...(i) (I) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;
- ...(ii) (II) The container or inner liner has been cleaned by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or
- ...(iii) (III) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container, has been

removed.

261.8

(h) PCB WASTES REGULATED UNDER TOXIC SUBSTANCE CONTROL ACT.

The disposal of PCB-containing dielectric fluid and electric equipment containing such fluid authorized for use and regulated under 40 CFR part 761 and that are hazardous only because they fail the test for the Toxicity Characteristic (Hazardous Waste Codes D018 through D043 only) are exempt from regulation under this Chapter; Chapter 1, Sections 1(h)-1(j); Chapters 3 through 11; and Chapter 13 of these rules and regulations, and the notification requirements of Chapter 1, Section 1(h) of these rules and regulations.

#### 261.9 (i) REQUIREMENTS FOR UNIVERSAL WASTE.

(i) The wastes listed in this Section are exempt from regulation under Chapter 1, Sections 1(h) through 1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapters 8 through 11; Chapter 12, Sections 1 through 8, 19 and 20; and Chapter 13 of these rules and regulations— except as specified in Chapter 14 of these rules and regulations and, therefore, are not fully regulated as hazardous waste. The wastes listed in Section 1(i) of this Chapter are subject to regulation under Chapter 14:

261.9(a) (A) Batteries as described in Chapter 14, Section 1(b) of these rules and regulations;

261.9(b) (B) Pesticides as described in Chapter 14, Section 1(c) of these rules and regulations; and

261.9(c) (C) Thermostats as described in Chapter 14, Section 1(d) of these rules and regulations<del>.; and</del>

(D) Mercury-Containing Lamps as described in Chapter 14, Section 1(e) of these rules and regulations. Lamps as described in Chapter 14, Section 1(e) of these rules and regulations.

- 261/Subpart B Section 2. CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF HAZARDOUS WASTE AND FOR LISTING HAZARDOUS WASTE.
- 261.10 (a) CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF HAZARDOUS WASTE.
- 261.10(a) (i) The Director shall identify and define a characteristic of hazardous waste in Section 3 of this Chapter only upon determining that:

261.10(a)(1) (A) A waste material that exhibits the characteristic may:

- ...(i) (I) Cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or
- ...(ii) (II) Pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of or otherwise managed; and

261.10(a)(2) (B) The characteristic can be:

...(i) (I) Measured by an available standardized test method which is reasonably within the capability of generators of waste material or private sector laboratories that are available to serve generators of waste material; or
...(ii) (II) Reasonably detected by generators of waste material through their knowledge of their waste.

261.11 (b) CRITERIA FOR LISTING HAZARDOUS WASTE.

- 261.11(a) (i) The Director shall list a waste material as a hazardous waste only upon determining that the waste material meets one of the following criteria:
- 261.11(a)(1) (A) It exhibits any of the characteristics of hazardous waste identified in Section 3 of this Chapter.
- 261.11(a)(2) (B) It has been found to be fatal to humans in low doses or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity (rat) of less than 50 milligrams per kilogram, an inhalation LC 50 toxicity (rat) of less than 2 milligrams per liter, or a dermal LD 50 toxicity (rabbit) of less than 200 milligrams per kilogram or is otherwise capable of causing or significantly contributing to an increase in serious irreversible, or incapacitating reversible, illness. (Waste listed in accordance with these criteria will be designated Acute Hazardous Waste.)
- 261.11(a)(3) (C) It contains any of the toxic constituents listed in Appendix H of this Chapter and, after considering the factors listed below, the Director concludes that the waste is capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed. (Wastes listed in accordance with these criteria will be designated toxic wastes.)

...(i) (I) The nature of the toxicity presented by the constituent.

...(ii)

the waste.

(II) The concentration of the constituent in

- ...(iii) (III) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in Section 2(b)(i)(C)(VII) of this Chapter.
- $\dots ({\rm iv})$  (IV) The persistence of the constituent or any toxic degradation product of the constituent.
- ...(v) (V) The potential for the constituent or any toxic degradation product of the constituent to degrade into nonharmful constituents and the rate of degradation.
- ...(vi) (VI) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems.
- ...(vii) (VII) The plausible types of improper management to which the waste could be subjected.
- ...(viii) (VIII)The quantities of the waste generated at individual generation sites or on a regional or national basis.
- ...(ix) (IX) The nature and severity of the human health and environmental damage that has occurred as a result of the improper management of wastes containing the constituent.

...(x)

(X) Action taken by other governmental

agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent.

...(xi)

(XI) Such other factors as may be

appropriate.

[Note: Substances will be listed on Appendix H of this Chapter only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic or teratogenic effects on humans or other life forms.]

- 261.11(b) (ii) The Director may list classes or types of waste material as hazardous waste if he or she has reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in W.S. 35-11-103(d)(vii).
- 261.11(c) (iii) The Director will use the criteria for listing specified in Section 2(b) of this Chapter to establish the exclusion limits referred to in Section 1(e)(iii) of this Chapter.

261/Subpart c Section 3. CHARACTERISTICS OF HAZARDOUS WASTE.

261.20 (a) GENERAL.

261.20(a) (i) A waste material, as defined in Section 1(b) Chapter 1, Section 1(f)(i) of these rules and regulations, which is not excluded from regulation as a hazardous waste under Section 1(d)(ii) of this Chapter, is a hazardous waste if it exhibits any of the characteristics identified in this Section.

[Comment: Chapter 8, Section 1(b) of these rules and regulations sets forth the generator's responsibility to determine whether his or her waste exhibits one or more of the characteristics identified in this Section.]

- 261.20(b) (ii) A hazardous waste which is identified by a characteristic in Section 3 of this Chapter is assigned every EPA hazardous waste number that is applicable as set forth in Section 3 of this Chapter. This number must be used in complying with the notification requirements of Chapter 1, Section 1(h) of these rules and regulations and all applicable recordkeeping and reporting requirements under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapters 8 through 11; and Chapter 13 of these rules and regulations.
- 261.20(c) (iii) For purposes of this Section, the Director will consider a sample obtained using any of the applicable sampling methods specified in Appendix A of this Chapter to be a representative sample within the meaning of Chapter 1, Sections 1(a) through 1(g) and Section 3 of these rules and regulations.

[Comment: Since the Appendix A (of this Chapter) sampling methods are not being formally adopted by the Director, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of his or her method under the procedures set forth in Chapter 1, Sections 3(a) and 3(b) of these rules and regulations]

- 261.21 (b) CHARACTERISTIC OF IGNITABILITY.
- 261.21(a) (i) A waste material exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

- 261.21(a)(1) (A) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume and has flash point less than 60EC (140EF), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D-93-79 or D-93-80 (incorporated by reference, see Chapter 1, Section 1(g) of these rules and regulations), or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78 (incorporated by reference, see Chapter 1, Section 1(g) of these rules and regulations), or as determined by an equivalent test method approved by the Director under procedures set forth in Chapter 1, Sections 3(a) and 3(b) of these rules and regulations.
- 261.21(a)(2) (B) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
- 261.21(a)(3) (C) It is an ignitable compressed gas as defined in 49 CFR 173.300 and as determined by the test methods described in that regulation or equivalent test methods approved by the Director under Chapter 1, Sections 3(a) and 3(b) of these rules and regulations.

```
261.21(a)(4) (D) It is an oxidizer as defined in 49 CFR 173.151.
```

- 261.21(b) (ii) A waste material that exhibits the characteristic of ignitability has the EPA Hazardous Waste Number of D001.
- 261.22 (C) CHARACTERISTIC OF CORROSIVITY.
- 261.22(a) (i) A waste material exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:
- 261.22(a)(1) (A) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using Method 9040 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in Chapter 1, Section 1(g) of these rules and regulations.
- 261.22(a)(2)\* (B) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55EC (130EF) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01-69 as standardized in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in Chapter 1, Section 1(g) of these rules and regulations.
- 261.22(b) (ii) A waste material that exhibits the characteristic of corrosivity has the EPA Hazardous Waste Number of D002.
- 261.23 (d) CHARACTERISTIC OF REACTIVITY.
- 261.23(a) (i) A waste material exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:
- 261.23(a)(1) (A) It is normally unstable and readily undergoes
  violent change without detonating.

- (B) It reacts violently with water.
- 261.23(a)(3) (C) It forms potentially explosive mixtures with water.
- 261.23(a)(4) (D) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 261.23(a)(5) (E) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 261.23(a)(6) (F) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.
- 261.23(a)(7) (G) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.
- 261.23(a)(8) (H) It is a forbidden explosive as defined in 49 CFR 173.51, or a Class A explosive as defined in 49 CFR 173.53 or a Class B explosive as defined in 49 CFR 173.88.
- 261.23(b) (ii) A waste material that exhibits the characteristic of reactivity has the EPA Hazardous Waste Number of D003.
- 261.24 (e) TOXICITY CHARACTERISTIC.
- (i) A waste material (except manufactured gas plant waste) exhibits the characteristic of toxicity if, using the Toxicity Characteristic Leaching Procedure, Test Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in Chapter 1, Section 1(g) of these rules and regulations, the extract from a representative sample of the waste contains any of the contaminants listed in Table 1 at the concentration equal to or greater than the respective value given in that table. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is considered to be the extract for the purpose of Section 3(e) of this Chapter.
- 261.24(b) (ii) A waste material that exhibits the characteristic of toxicity has the EPA Hazardous Waste Number specified in Table I which corresponds to the toxic contaminant causing it to be hazardous.

| Table 1 Maximum Concentration of Contaminants for the<br>Toxicity Characteristic |                      |                |                                |
|--|----------------------|----------------|--------------------------------|
| EPA HW<br>No.  | Contaminant          | CAS No. $^{2}$ | Regulator<br>y Level<br>(mg/L) |
| D004   | Arsenic              | 7440-38-2      | 5.0                            |
| D005   | Barium               | 7440-39-3      | 100.0                          |

| D010 | Selenium                     | 7782-49-2 | 1.0               |
| D011 | Silver                       | 7440-22-4 | 5.0               |
| D039 | Tetrachloroethylene          | 127-18-4  | 0.7               |
| D015 | Toxaphene                    | 8001-35-2 | 0.5               |
| D040 | Trichloroethylene            | 79-01-6   | 0.5               |
| D041 | 2,4,5-Trichlorophenol        | 95-95-4   | 400.0             |
| D042 | 2,4,6-Trichlorophenol        | 88-06-2   | 2.0               |
| D017 | 2,4,5-TP (Silvex)            | 93-72-1   | 1.0               |
| D043 | Vinyl chloride               | 75-01-4   | 0.2               |

FOOTNOTE: <sup>1</sup>Hazardous waste number. FOOTNOTE: <sup>2</sup>Chemical abstracts service number. FOOTNOTE: <sup>3</sup>Quantitation limit is greater than the calculated regulatory level. The quantitation limit therefore becomes the regulatory level. FOOTNOTE: <sup>4</sup>If o-, m-, and p-Cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used. The regulatory level of total cresol is 200 mg/l.

261/Subpart D Section 4. LISTS OF HAZARDOUS WASTES.

261.30 (a) GENERAL.

261.30(a) (i) A waste material is a hazardous waste if it is listed in this Section, unless it has been excluded from this list by the Director under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations and noted in Appendix I of this Chapter.

261.30(b) (ii) The Director will indicate his or her basis for listing the classes or types of wastes listed in this Section by employing one or more of the following Hazard Codes:

| Ignitable Waste               | (I) |
|-------------------------------|-----|
| Corrosive Waste               | (C) |
| Reactive Waste                | (R) |
| Toxicity Characteristic Waste | (E) |
| Acute Hazardous Waste         | (H) |
| Toxic Waste                   | (T) |

Appendix G of this Chapter identifies the constituent which caused the EPA Administrator to list the waste as a Toxicity Characteristic Waste (E) or Toxic Waste (T) in Sections 4(b) and 4(c) of this Chapter.

- 261.30(c) (iii) Each hazardous waste listed in this Section is assigned an EPA Hazardous Waste Number which precedes the name of the waste. This number must be used in complying with the notification requirements of Chapter 1, Section 1(h) of these rules and regulations and certain recordkeeping and reporting requirements under Chapter 1, Sections 1(h)-1(j); Chapter 3, Section 2; Chapter 4; Chapter 5; Chapter 6, Section 2; Chapter 7; Chapters 8 through 11; and Chapter 13 of these rules and regulations.
- 261.30(d) (iv) The following hazardous wastes listed in Section 4(b) or 4(c) of this Chapter are subject to the exclusion limits for acutely hazardous wastes established in Section 1(e) of this Chapter: EPA Hazardous Wastes Nos. F020, F021, F022, F023, F026, and F027.
- 261.31 (b) HAZARDOUS WASTES FROM NON-SPECIFIC SOURCES.

261.31(a) (i) The following waste materials are listed hazardous wastes from non-specific sources unless they are excluded by the Director under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations and listed in Appendix I of this Chapter.

| Industry<br>and EPA<br>hazardous<br>waste No. | Hazardous waste | Hazard<br>code |
|---|-----------------|----------------|
|---|-----------------|----------------|

| _   |  | _              |
|---|--|----------------|
| Industry<br>and EPA<br>hazardous<br>waste No. | Hazardous waste  | Hazard<br>code |
| Generic:                                      |  |                |
| F001  | The following spent halogenated solvents used in degreasing:<br>Tetrachloroethylene, trichloroethylene, methylene chloride,<br>1,1,1-trichloroethane, carbon tetrachloride, and chlorinated<br>fluorocarbons; all spent solvent mixtures/blends used in<br>degreasing containing, before use, a total of ten percent or<br>more (by volume) of one or more of the above halogenated<br>solvents or those solvents listed in F002, F004, and F005;<br>and still bottoms from the recovery of these spent solvents<br>and spent solvent mixtures.  | (Т)            |
| F002  | The following spent halogenated solvents:<br>Tetrachloroethylene, methylene chloride, trichloroethylene,<br>1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-<br>trifluoroethane, ortho-dichlorobenzene,<br>trichlorofluoromethane, and 1,1,2-trichloroethane; all spent<br>solvent mixtures/blends containing, before use, a total of<br>ten percent or more (by volume) of one or more of the above<br>halogenated solvents or those listed in F001, F004, or F005;<br>and still bottoms from the recovery of these spent solvents<br>and spent solvent mixtures.   | (Т)            |
| F003  | The following spent non-halogenated solvents: Xylene,<br>acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl<br>isobutyl ketone, n-butyl alcohol, cyclohexanone, and<br>methanol; all spent solvent mixtures/blends containing,<br>before use, only the above spent non-halogenated solvents;<br>and all spent solvent mixtures/blends containing, before use,<br>one or more of the above non-halogenated solvents, and, a<br>total of ten percent or more (by volume) of one or more of<br>those solvents listed in F001, F002, F004, and F005; and<br>still bottoms from the recovery of these spent solvents and<br>spent solvent mixtures. | (I)*           |
| F004  | The following spent non-halogenated solvents: Cresols and<br>cresylic acid, and nitrobenzene; all spent solvent<br>mixtures/blends containing, before use, a total of ten<br>percent or more (by volume) of one or more of the above non-<br>halogenated solvents or those solvents listed in F001, F002,<br>and F005; and still bottoms from the recovery of these spent<br>solvents and spent solvent mixtures.  | (Т)            |
| F005  | The following spent non-halogenated solvents: Toluene, methyl<br>ethyl ketone, carbon disulfide, isobutanol, pyridine,<br>benzene, 2-ethoxyethanol, and 2-nitropropane; all spent<br>solvent mixtures/blends containing, before use, a total of<br>ten percent or more (by volume) of one or more of the above<br>non-halogenated solvents or those solvents listed in F001,<br>F002, or F004; and still bottoms from the recovery of these<br>spent solvents and spent solvent mixtures.  | (I,T)          |
| F006  | Wastewater treatment sludges from electroplating operations<br>except from the following processes: (1) Sulfuric acid<br>anodizing of aluminum; (2) tin plating on carbon steel; (3)<br>zinc plating (segregated basis) on carbon steel; (4) aluminum<br>or zinc-aluminum plating on carbon steel; (5)<br>cleaning/stripping associated with tin, zinc and aluminum<br>plating on carbon steel; and (6) chemical etching and milling<br>of aluminum.   | (Т)            |
| F007  | Spent cyanide plating bath solutions from electroplating operations.   | (R, T)         |
| F008  | Plating bath residues from the bottom of plating baths from<br>electroplating operations where cyanides are used in the<br>process.  | (R, T)         |
| F009  | Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.   | (R, T)         |
| F010  | Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process.   | (R, T)         |

| Industry<br>and EPA<br>hazardous<br>waste No. | Hazardous waste  | Hazard<br>code |
|---|--|----------------|
| F011  | Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.   | (R, T)         |
| F012  | Quenching waste water treatment sludges from metal heat<br>treating operations where cyanides are used in the process.   | (T)            |
| F019  | Wastewater treatment sludges from the chemical conversion<br>coating of aluminum except from zirconium phosphating in<br>aluminum can washing when such phosphating is an exclusive<br>conversion coating process.   | (T)            |
| F020  | Wastes (except wastewater and spent carbon from hydrogen<br>chloride purification) from the production or manufacturing<br>use (as a reactant, chemical intermediate, or component in a<br>formulating process) of tri- or tetrachlorophenol, or of<br>intermediates used to produce their pesticide derivatives.<br>(This listing does not include wastes from the production of<br>Hexachlorophene from highly purified 2,4,5-trichlorophenol.).   | (H)            |
| F021  | Wastes (except wastewater and spent carbon from hydrogen<br>chloride purification) from the production or manufacturing<br>use (as a reactant, chemical intermediate, or component in a<br>formulating process) of pentachlorophenol, or of<br>intermediates used to produce its derivatives.  | (H)            |
| F022  | Wastes (except wastewater and spent carbon from hydrogen<br>chloride purification) from the manufacturing use (as a<br>reactant, chemical intermediate, or component in a<br>formulating process) of tetra-, penta-, or hexachlorobenzenes<br>under alkaline conditions.   | (H)            |
| F023  | Wastes (except wastewater and spent carbon from hydrogen<br>chloride purification) from the production of materials on<br>equipment previously used for the production or manufacturing<br>use (as a reactant, chemical intermediate, or component in a<br>formulating process) of tri- and tetrachlorophenols. (This<br>listing does not include wastes from equipment used only for<br>the production or use of Hexachlorophene from highly purified<br>2,4,5-trichlorophenol.).   | (H)            |
| F024  | Process wastes, including but not limited to, distillation<br>residues, heavy ends, tars, and reactor clean-out wastes,<br>from the production of certain chlorinated aliphatic<br>hydrocarbons by free radical catalyzed processes. These<br>chlorinated aliphatic hydrocarbons are those having carbon<br>chain lengths ranging from one to and including five, with<br>varying amounts and positions of chlorine substitution.<br>(This listing does not include wastewaters, wastewater<br>treatment sludges, spent catalysts, and wastes listed in<br>Section 4(b) or 4(c) of this Chapter.). | (T)            |
| F025  | Condensed light ends, spent filters and filter aids, and<br>spent desiccant wastes from the production of certain<br>chlorinated aliphatic hydrocarbons, by free radical catalyzed<br>processes. These chlorinated aliphatic hydrocarbons are those<br>having carbon chain lengths ranging from one to and including<br>five, with varying amounts and positions of chlorine<br>substitution.  | (Т)            |
| F026  | Wastes (except wastewater and spent carbon from hydrogen<br>chloride purification) from the production of materials on<br>equipment previously used for the manufacturing use (as a<br>reactant, chemical intermediate, or component in a<br>formulating process) of tetra-, penta-, or hexachlorobenzene<br>under alkaline conditions.  | (H)            |
| F027  | Discarded unused formulations containing tri-, tetra-, or<br>pentachlorophenol or discarded unused formulations containing<br>compounds derived from these chlorophenols. (This listing<br>does not include formulations containing Hexachlorophene<br>synthesized from prepurified 2,4,5-trichlorophenol as the<br>sole component.).  | (H)            |
| F028  | Residues resulting from the incineration or thermal treatment  | (T)            |

| Industry<br>and EPA<br>hazardous | Hazardous waste  | Hazard<br>code |
|----------------------------------|--|----------------|
| waste NO.                        | of soil contaminated with EPA Hazardous Waste Nos. F020,<br>F021, F022, F023, F026, and F027.  |                |
| F032                             | Wastewaters (except those that have not come into contact<br>with process contaminants), process residuals, preservative<br>drippage, and spent formulations from wood preserving<br>processes generated at plants that currently use or have<br>previously used chlorophenolic formulations (except<br>potentially cross-contaminated wastes that have had the F032<br>waste code deleted in accordance with Section 4(e) of this<br>Chapter or potentially cross-contaminated wastes that are<br>otherwise currently regulated as hazardous wastes (i.e., F034<br>or F035), and where the generator does not resume or initiate<br>use of chlorophenolic formulations). This listing does not<br>include K001 bottom sediment sludge from the treatment of<br>wastewater from wood preserving processes that use creosote<br>and/or pentachlorophenol.   | (T)            |
| F034                             | Wastewaters (except those that have not come into contact<br>with process contaminants), process residuals, preservative<br>drippage, and spent formulations from wood preserving<br>processes generated at plants that use creosote formulations.<br>This listing does not include K001 bottom sediment sludge<br>from the treatment of wastewater from wood preserving<br>processes that use creosote and/or pentachlorophenol.  | (Т)            |
| F035                             | Wastewaters (except those that have not come into contact<br>with process contaminants), process residuals, preservative<br>drippage, and spent formulations from wood preserving<br>processes generated at plants that use inorganic<br>preservatives containing arsenic or chromium. This listing<br>does not include K001 bottom sediment sludge from the<br>treatment of wastewater from wood preserving processes that<br>use creosote and/or pentachlorophenol.  | (T)            |
| F037                             | Petroleum refinery primary oil/water/solids separation<br>sludge-Any sludge generated from the gravitational separation<br>of oil/water/solids during the storage or treatment of<br>process wastewaters and oily cooling wastewaters from<br>petroleum refineries. Such sludges include, but are not<br>limited to, those generated in- oil/water/solids separators;<br>tanks and impoundments; ditches and other conveyances; sumps;<br>and stormwater units receiving dry weather flow. Sludge<br>generated in stormwater units that do not receive dry weather<br>flow, sludges generated from non-contact once-through cooling<br>waters segregated for treatment from other process or oily<br>cooling waters, sludges generated in aggressive biological<br>treatment units as defined in Section 4(b)(ii)(B) of this<br>Chapter (including sludges generated in one or more<br>additional units after wastewaters have been treated in<br>aggressive biological treatment units) and K051 wastes are<br>not included in this listing. This listing does include<br>residuals generated from processing or recycling oil-bearing<br>hazardous secondary materials excluded under Section<br>1(d)(i)(L)(I) of this Chapter, if those residuals are to be<br>disposed of. | (T)            |
| F038                             | Petroleum refinery secondary (emulsified) oil/water/solids<br>separation sludge-Any sludge and/or float generated from the<br>physical and/or chemical separation of oil/water/solids in<br>process wastewaters and oily cooling wastewaters from<br>petroleum refineries. Such wastes include, but are not<br>limited to, all sludges and floats generated in: induced air<br>flotation (IAF) units, tanks and impoundments, and all<br>sludges generated in DAF units. Sludges generated in<br>stormwater units that do not receive dry weather flow,<br>sludges generated from non-contact once-through cooling<br>waters segregated for treatment from other process or oily<br>cooling waters, sludges and floats generated in aggressive<br>biological treatment units as defined in Section 4(b)(ii)(B)<br>of this Chapter(including sludges and floats generated in one<br>or more additional units after wastewaters have been treated<br>in aggressive biological treatment units) and F037, K048, and<br>K051 wastes are not included in this listing.  | (T)            |

| Industry<br>and EPA<br>hazardous<br>waste No. | Hazardous waste  | Hazard<br>code |
|---|--|----------------|
| F039  | Leachate (liquids that have percolated through land disposed wastes) resulting from the disposal of more than one restricted waste classified as hazardous under Section 4 of this Chapter. (Leachate resulting from the disposal of one or more of the following EPA Hazardous Wastes and no other Hazardous Wastes retains its EPA Hazardous Waste Number(s): F020, F021, F022, F026, F027, and/or F028.). | (T)            |

FOOTNOTE: \*(I,T) should be used to specify mixtures containing ignitable and toxic constituents.

261.31(b) (ii) Listing specific definitions:

- 261.31(b)(1) (A) For the purposes of the F037 and F038 listings, oil/water/solids is defined as oil and/or water and/or solids.
- 261.31(b)(2)(i) (B) For the purposes of the F037 and F038 listings:
- 261.31(b)(2)(i) (I) Aggressive biological treatment units are defined as units which employ one of the following four treatment methods: activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and
- $\dots$  (1.) The units employ a minimum of 6 hp per million gallons of treatment volume; and either
- ...(i)(B) (2.) THe hydraulic retention time of the unit is no longer than 5 days; or
- ...(i)(c) (3.) The hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the toxicity characteristic.
- ...(Ii) (II) Generators and treatment, storage and disposal facilities have the burden of proving that their sludges are exempt from listing as F037 and F038 wastes under this definition. Generators and treatment, storage and disposal facilities must maintain, in their operating or other onsite records, documents and data sufficient to prove that:
- ...(ii)(A) (1.) The unit is an aggressive biological treatment unit as defined in Section 4(b)(ii) of this Chapter; and
- ...(iii)(B) (2.) The sludges sought to be exempted from the definitions of F037 and/or F038 were actually treated in the aggressive biological treatment unit.

261.31(b)(3)(i) (C) For the purposes of the F037 listing,

261.31(b)(3)(i) (I) Sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement.

...(ii)

(II) For the purposes of the F038 listing,

2-43

...(ii)(A) (1.) Sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement and

...(ii)(B) (2.) Floats are considered to be generated at the moment they are formed in the top of the unit.

261.32 (c) HAZARDOUS WASTES FROM SPECIFIC SOURCES.

The following waste materials are listed hazardous wastes from specific sources unless they are excluded **by the Director** under Chapter 1, Sections 3(a) and 3(c) of these rules and regulations and listed in Appendix I.

| Industry<br>and EPA<br>hazardous<br>waste No. | Hazardous waste   | Hazard code |
|---|---|-------------|
| Wood<br>preserva-<br>tion:                    |   |             |
| K001  | Bottom sediment sludge from the treatment of<br>wastewaters from wood preserving processes<br>that use creosote and/or pentachlorophenol. | (T)         |
| Inorganic<br>pigments:                        |   |             |
| K002  | Wastewater treatment sludge from the production of chrome yellow and orange pigments.   | (T)         |
| к003  | Wastewater treatment sludge from the production of molybdate orange pigments.   | (T)         |
| к004  | Wastewater treatment sludge from the production of zinc yellow pigments.  | (T)         |
| к005  | Wastewater treatment sludge from the production of chrome green pigments.   | (T)         |
| K006  | Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).                                  | (T)         |
| к007  | Wastewater treatment sludge from the production of iron blue pigments.  | (T)         |
| к008  | Oven residue from the production of chrome oxide green pigments.  | (T)         |
| Organic<br>chemicals:                         |   |             |
| к009  | Distillation bottoms from the production of acetaldehyde from ethylene.   | (T)         |
| к010  | Distillation side cuts from the production of acetaldehyde from ethylene.   | (T)         |
| к011  | Bottom stream from the wastewater stripper in the production of acrylonitrile.  | (R, T)      |

| Industry<br>and EPA    | Hazardous waste   | Hazard code |
|------------------------|---|-------------|
| hazardous<br>waste No. |   |             |
| К013                   | Bottom stream from the acetonitrile column in the production of acrylonitrile.                        | (R, T)      |
| к014                   | Bottoms from the acetonitrile purification column in the production of acrylonitrile.                 | (Т)         |
| К015                   | Still bottoms from the distillation of benzyl chloride.   | (T)         |
| К016                   | Heavy ends or distillation residues from the production of carbon tetrachloride.                      | (T)         |
| K017                   | Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.         | (T)         |
| К018                   | Heavy ends from the fractionation column in ethyl chloride production.                                | (T)         |
| К019                   | Heavy ends from the distillation of ethylene<br>dichloride in ethylene dichloride production.         | (T)         |
| K020                   | Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.              | (T)         |
| К021                   | Aqueous spent antimony catalyst waste from<br>fluoromethanes production.                              | (T)         |
| К022                   | Distillation bottom tars from the production of phenol/acetone from cumene.                           | (T)         |
| К023                   | Distillation light ends from the production of phthalic anhydride from naphthalene.                   | (T)         |
| К024                   | Distillation bottoms from the production of phthalic anhydride from naphthalene.                      | (T)         |
| к025                   | Distillation bottoms from the production of nitrobenzene by the nitration of benzene.                 | (T)         |
| К026                   | Stripping still tails from the production of methy ethyl pyridines.                                   | (T)         |
| К027                   | Centrifuge and distillation residues from toluene diisocyanate production.                            | (R, T)      |
| K028                   | Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.          | (T)         |
| К029                   | Waste from the product steam stripper in the production of 1,1,1-trichloroethane.                     | (T)         |
| к030                   | Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene. | (T)         |
| К083                   | Distillation bottoms from aniline production.   | (T)         |
| К085                   | Distillation or fractionation column bottoms<br>from the production of chlorobenzenes.                | (T)         |
| к093                   | Distillation light ends from the production of  | (T)         |

| Industry<br>and EPA    | Hazardous waste   | Hazard code |
|------------------------|---|-------------|
| hazardous<br>waste No. |   |             |
|                        | phthalic anhydride from ortho-xylene.   |             |
| К094                   | Distillation bottoms from the production of phthalic anhydride from ortho-xylene.   | (T)         |
| К095                   | Distillation bottoms from the production of 1,1,1-trichloroethane.  | (T)         |
| К096                   | Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.   | (Т)         |
| К103                   | Process residues from aniline extraction from the production of aniline.  | (Т)         |
| К104                   | Combined wastewater streams generated from nitrobenzene/aniline production.   | (Т)         |
| K105                   | Separated aqueous stream from the reactor<br>product washing step in the production of<br>chlorobenzenes.   | (T)         |
| K107                   | Column bottoms from product separation from<br>the production of 1,1-dimethyl-hydrazine<br>(UDMH) from carboxylic acid hydrazines.  | (C,T)       |
| K108                   | Condensed column overheads from product<br>separation and condensed reactor vent gases<br>from the production of 1,1-dimethylhydrazine<br>(UDMH) from carboxylic acid hydrazides. | (I,T)       |
| K109                   | Spent filter cartridges from product<br>purification from the production of 1,1-<br>dimethylhydrazine (UDMH) from carboxylic acid<br>hydrazides.                                  | (Т)         |
| к110                   | Condensed column overheads from intermediate<br>separation from the production of 1,1-<br>dimethylhydrazine (UDMH) from carboxylic acid<br>hydrazides.                            | (Т)         |
| К111                   | Product washwaters from the production of dinitrotoluene via nitration of toluene.  | (C,T)       |
| К112                   | Reaction by-product water from the drying<br>column in the production of toluenediamine via<br>hydrogenation of dinitrotoluene.   | (T)         |
| к113                   | Condensed liquid light ends from the<br>purification of toluenediamine in the<br>production of toluenediamine via hydrogenation<br>of dinitrotoluene.                             | (Т)         |
| к114                   | Vicinals from the purification of<br>toluenediamine in the production of<br>toluenediamine via hydrogenation of<br>dinitrotoluene.  | (Т)         |
| к115                   | Heavy ends from the purification of<br>toluenediamine in the production of<br>toluenediamine via hydrogenation of<br>dinitrotoluene.  | (Т)         |
| К116                   | Organic condensate from the solvent recovery  | (T)         |

261.33 (d) DISCARDED COMMERCIAL CHEMICAL PRODUCTS, OFF-SPECIFICATION SPECIES, CONTAINER RESIDUES, AND SPILL RESIDUES THEREOF.

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded as described in Chapter 1, Section 1(f)(i) of these rules and regulations, when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment, when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to the land in lieu of their original intended use, or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

- 261.33(a) (i) Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in Section 4(d)(v) or 4(d)(vi) of this Chapter.
- 261.33(b) (ii) Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in Section 4(d)(v) or 4(d)(vi) of this Chapter.
- $_{261,33(c)}$  (iii) Any residue remaining in a container or in an inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Section 4(d)(v) or 4(d)(vi) of this Chapter, unless the container is empty as defined in Section 1(g)(ii) of this Chapter.

[Comment: Unless the residue is being beneficially used or reused, or legitimately recycled or reclaimed; or being accumulated, stored, transported or treated prior to such use, re-use, recycling or reclamation, the State considers the residue to be intended for discard, and thus, a hazardous waste. An example of the legitimate re-use of the residue would be where the residue remains in the container and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to a drum reconditioner who reconditions the drum but discards the residue.]

261.33(d) (iv) Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in Section 4(d)(v) or 4(d)(vi) of this Chapter, or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any off-specification chemical product and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in Section 4(d)(v) or 4(d)(vi) of this Chapter.

[Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in . . ." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use which consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in Section 4(d)(v) or (vi) of this Chapter. Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in Section 4(d)(v) or (vi) of this Chapter, such waste will be listed in either Section 4(b) or 4(c) of this Chapter or will be identified as a hazardous waste by the characteristics set forth in Section 3 of this Chapter.]

261.33(e) (v) The commercial chemical products, manufacturing chemical intermediates or off-specification commercial chemical products or manufacturing chemical intermediates referred to in Sections 4(d)(i) through 4(d)(iv) of this Chapter, are identified as acute hazardous wastes (H) and are subject to be the small quantity exclusion defined in Section 1(e)(v) of this Chapter).

[Comment: For the convenience of the regulated community the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity.]

FOOTNOTE: <sup>1</sup>CAS Number given for parent compound only.

261.33(f)

(vi) The commercial chemical products, manufacturing

chemical intermediates, or off-specification commercial chemical products referred to in Sections 4(d)(i) through 4(d)(iv) of this Chapter, are identified as toxic wastes (T), unless otherwise designated and are subject to the small quantity generator exclusion defined in Sections 1(e)(i) and (vii) of this Chapter.

[Comment: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability) and C (Corrosivity). Absence of a letter indicates that the compound is only listed for toxicity.]

These wastes and their corresponding EPA Hazardous Waste Numbers are:

FOOTNOTE: <sup>1</sup>CAS Number given for parent compound only.

261.35 (e) DELETION OF CERTAIN HAZARDOUS WASTE CODES FOLLOWING EQUIPMENT CLEANING AND REPLACEMENT.

(i) Wastes from wood preserving processes at plants that do not resume or initiate use of chlorophenolic preservatives will not meet the listing definition of F032 once the generator has met all of the requirements of Sections 4(e)(ii) and 4(e)(iii) of this Chapter. These wastes may, however, continue to meet another hazardous waste listing description or may exhibit one or more of the hazardous waste characteristics.

(ii) Generators must either clean or replace all process 261.35(b) equipment that may have come into contact with chlorophenolic formulations or constituents thereof, including, but not limited to, treatment cylinders, sumps, tanks, piping systems, drip pads, fork lifts, and trams, in a manner that minimizes or eliminates the escape of hazardous waste or constituents, leachate, contaminated drippage, or hazardous waste decomposition products to the ground water, surface water, or atmosphere. Generators shall do one of the following: 261.35(b)(1) (A) Prepare and follow an equipment ...(i) (I) cleaning plan and clean equipment in accordance with Section 4(e) of this Chapter; (II) Prepare and follow an equipment ...(ii) replacement plan and replace equipment in accordance with Section 4(e) of this Chapter; or (III) Document cleaning and replacement in ...(iii) accordance with Section 4(e) of this Chapter, carried out after termination of use of chlorophenolic preservations. Cleaning requirements. 261.35(b)(2) (B) Prepare and sign a written equipment (I) ...(i) cleaning plan that describes: (1.) The equipment to be cleaned; ...(i)(A) (2.) How the equipment will be ...(i)(B) cleaned; (3.) The solvent to be used in ...(i)(C) cleaning; (4.) How solvent rinses will be ...(i)(D) tested; and (5.) How cleaning residues will be ...(i)(E) disposed. (II) Equipment must be cleaned as follows: ...(ii) (1.) Remove all visible residues from ...(ii)(A) process equipment; (2.) Rinse process equipment with an ...(ii)(B) appropriate solvent until dioxins and dibenzofurans are not detected in the final solvent rinse. (III) Analytical requirements. ...(iii) (1.) Rinses must be tested in ...(iii)(A) accordance with SW-846, Method 8290. ...(iii)(B) (2.)"Not detected" means at or below the lower method calibration limit (MCL) in Method 8290, Table 1. (IV) The generator must manage all residues ...(iv) from the cleaning process as F032 waste. Replacement requirements. 261.35(b)(3) (C)

(I) Prepare and sign a written equipment ...(i) replacement plan that describes: The equipment to be replaced; (i)(A) (1.)(2.) How the equipment will be ...(i)(B) replaced; and (3.) How the equipment will be ...(i)(C) disposed. (II) The generator must manage the discarded ...(ii) equipment as F032 waste. 261.35(b)(4) (D) Documentation requirements. (I) Document that previous equipment ...(I) cleaning and/or replacement was performed in accordance with Section 4(e) of this Chapter and occurred after cessation of use of chlorophenolic preservatives. (iii) The generator must maintain the following records 261.35(c) documenting the cleaning and replacement as part of the facility's operating record: The name and address of the facility; (A) 261.35(c)(1) (B) Formulations previously used and the date on 261.35(c)(2)which their use ceased in each process at the plant; Formulations currently used in each process (C) 261.35(c)(3) at the plant; The equipment cleaning or replacement plan; 261.35(c)(4) (D) (E) The name and address of any persons who 261.35(c)(5) conducted the cleaning and replacement; The dates on which cleaning and replacement 261.35(c)(6) (F) were accomplished; The dates of sampling and testing; 261.35(c)(7) (G) A description of the sample handling and (H) 261.35(c)(8) preparation techniques, including techniques used for extraction, containerization, preservation, and chain-of-custody of the samples; A description of the tests performed, the 261.35(c)(9) (I) date the tests were performed, and the results of the tests; 261.35(c)(10) (J) The name and model numbers of the instrument(s) used in performing the tests; (K) QA/QC documentation; and 261.35(c)(11) 261.35(c)(12) (L) The following statement signed by the generator or his or her authorized representative: I certify under penalty of law that all process equipment required to be cleaned or replaced under Chapter 2, Section (4)(e) of the Wyoming

Hazardous Waste Rules and Regulations was cleaned or replaced as represented in the equipment cleaning and replacement plan and accompanying documentation. I am aware that there are significant penalties for providing false information, including the possibility of fine or imprisonment.

#### TABLE 1 TO Chapter 2, Section 4(h): DETECTION AND DETECTION LIMIT VALUES FOR COMPARABLE FUEL SPECIFICATION

<sup>a</sup> <u>Absence of PCBs can also be demonstrated by using</u> <u>appropriate screening methods, e.q., immunoassay kit for PCB in oils</u> <u>(Method 4020) or colorimetric analysis for PCBs in oil (Method 9079).</u>

<sup>b</sup> <u>Some minimum required detection limits are above the total</u> <u>halogen limit of 540 ppm. The detection limits reflect what was</u> <u>achieved during EPA testing and analysis and also analytical complexity</u> <u>associated with measuring all halogen compounds on Appendix H at low</u> <u>levels. EPA recognizes that in practice the presence of these compounds</u> <u>will be functionally limited by the molecular weight and the total</u> <u>halogen limit of 540 ppm.</u>

(<sup>1</sup>) 25 or individual halogenated organics listed below.

(iii) Implementation. Waste that meets the comparable or 261.38(c) syngas fuel specifications provided by Sections 4(h)(i)or(ii) of this Chapter (these constituent levels must be achieved by the comparable fuel when generated, or as a result of treatment or blending, as provided in Sections 4(h)(iii)(C) or (D) of this Chapter) is excluded from the definition of waste material provided that the following requirements are met: (A) Notices. For purposes of Section 4(h) of 261.38(c)(1) this Chapter, the person claiming and qualifying for the exclusion is called the comparable/syngas fuel generator and the person burning the comparable/syngas fuel is called the comparable/syngas burner. The person who generates the comparable fuel or syngas fuel must claim and certify to the exclusion. The Director or the Solid and Hazardous ...(i) (I) Waste and Air Quality Administrators. (1.)...(i)(A) The generator must submit a onetime notice to the Director or Solid and Hazardous Waste and Air Quality Administrators in whose jurisdiction the exclusion is being claimed and where the comparable/syngas fuel will be burned, certifying compliance with the conditions of the exclusion and providing documentation as required by Section 4(h)(iii)(A)(I)(3.) of this Chapter; (2.) If the generator is a company ...(i)(B) that generates comparable/syngas fuel at more than one facility, the generator shall specify at which sites the comparable/syngas fuel will be generated; ...(i)(C) (3.) A comparable/syngas fuel generator=s notification to the Director or Solid and Hazardous Waste and Air Ouality Administrators must contain the following items: ...(i)(C)(1) (a.) The name, address, and RCRA ID number of the person/facility claiming the exclusion; (b.) The applicable EPA ...(i)(C)(2) Hazardous Waste Codes for the hazardous waste; ...(i)(C)(3) (c.) Name and address of the units, meeting the requirements of Section 4(h)(iii)(B) of this Chapter, that will burn the comparable/syngas fuel; and (d.) The following statement is signed and submitted by the person claiming the exclusion or his or ...(i)(C)(<u>4</u>) her authorized representative: "Under penalty of criminal and civil prosecution for making or submitting false statements, representations, or omissions, I certify that the requirements of Section 4(h) of this Chapter have been met for all waste identified in this notification. Copies of the records and information required at Section 4(h)(iii)(J) of this Chapter are available at the comparable/syngas fuel generator=s facility. Based on my inquiry of the individuals immediately responsible for obtaining the information, the information is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations." (II) Public notice. Prior to burning an ...(ii)

excluded comparable/syngas fuel, the burner must publish in a major newspaper of general circulation local to the site where the fuel

will be burned, a notice entitled "Notification of Burning a Comparable/Syngas Fuel Excluded Under the Resource Conservation and Recovery Act" containing the following information: (1.) Name, address, and RCRA ID number ...(ii)(A) of the generating facility; (2.) Name and address of the unit(s) ...(ii)(B) that will burn the comparable/syngasfuel; (3.) A brief, general description of ...(ii)(C) the manufacturing, treatment, or other process generating the comparable/syngas fuel; ...(ii)(D) (4.) An estimate of the average and maximum monthly and annual quantity of the waste claimed to be excluded; and (5.) Name and mailing address of the ...(ii)(E) Director or Solid and Hazardous Waste and Air Quality Administrators to whom the claim was submitted. Burning. The comparable/syngas fuel (<u>B)</u> 261.38(c)(2) exclusion for fuels meeting the requirements of Section 4(h)(i) or (ii) and (iii)(A) of this Chapter applies only if the fuel is burned in the following units that also shall be subject to Federal/State/local air emission requirements, including all applicable CAA MACT requirements: ...(i) (I) Industrial furnaces as defined in Chapter 1, Section 1(f)(i) of these rules and regulations; (II) Boilers, as defined in Chapter 1, ...(ii) Section 1(f)(i) of these rules and regulations, that are further defined as follows: (1.) Industrial boilers located on the ...(ii)(A) site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes; or (2.) Utility boilers used to produce ...(ii)(B) electric power, steam, heated or cooled air, or other gases or fluids for sale; (III) Hazardous waste incinerators subject to ...(iii) regulation under Chapter 10, Section 14 of these rules and regulations; Chapter 11, Section 16 of these rules and regulations; or applicable CAA MACT standards. 2<u>61.38(c)(3)</u> Blending to meet the viscosity specification. A hazardous waste blended to meet the viscosity specification shall: As generated and prior to any blending, ...(i) (I) manipulation, or processing meet the constituent and heating value specifications of Sections 4(h)(i)(A)(I) and (i)(B) of this Chapter; ...(ii) (II) Be blended at a facility that is subject to the applicable requirements of Chapters 5, 10 and 11 of these rules and regulations; or Chapter 8, Section 3(e) of these rules and regulations; and (III) Not violate the dilution prohibition of ...(iii) Section 4(h)(iii)(F) of this Chapter.

| <u>261.38(c</u> | (D) Treatment to meet the comparable fuel  |
|-----------------|--|
|                 | exclusion specifications.  |
| <u>(i)</u>      | (I) A hazardous waste may be treated to<br>meet the exclusion specifications of Sections 4(h)(i)(A) and (B) of<br>this Chapter provided the treatment:   |
| <u>(i)(A</u>    | (1.) Destroys or removes the <u>constituent listed in the specification or raises the heating value</u> by removing or destroying hazardous constituents or materials;   |
| <u>(i)(E</u>    | (2.) Is performed at a facility that<br>is subject to the applicable requirements of Chapters 5, 10 and 11 of<br>these rules and regulations, or Chapter 8, Section 3(e) of these<br>rules and regulations; and  |
| <u>(i)(C</u>    | <u>(3.)</u> Does not violate the dilution<br>prohibition of Section 4(h)(iii)(F) of this Chapter.  |
| <u>(ii)</u>     | (II) Residuals resulting from the treatment<br>of a hazardous waste listed in Section 4 of this Chapter to generate<br>a comparable fuel remain a hazardous waste.   |
| <u>261.38(c</u> | (E) Generation of a syngas fuel.   |
| <u>(i)</u>      | (I) A syngas fuel can be generated from the processing of hazardous wastes to meet the exclusion specifications of Section 4(h)(ii) of this Chapter provided the processing:   |
| <u>(i)(</u> #   | (1.) Destroys or removes the<br>constituent listed in the specification or raises the heating value<br>by removing or destroying constituents or materials;  |
| (i)(E           | (2.) Is performed at a facility that<br>is subject to the applicable requirements of Chapters 5, 10 and 11 of<br>these rules and regulations, or Chapter 8, Section 3(e) of these<br>rules and regulations; or is an exempt recycling unit pursuant to<br>Section 1(f)(iii) of this Chapter; and   |
| <u>(i)(C</u>    | <u>(3.)</u> Does not violate the dilution<br>prohibition of Section 4(h)(iii)(F) of this Chapter.  |
| <u>(ii)</u>     | (II) Residuals resulting from the treatment<br>of a hazardous waste listed in Section 4 of this Chapter to generate<br>a syngas fuel remain a hazardous waste.   |
| <u>261.38(c</u> | (F) Dilution prohibition for comparable and<br>syngas fuels. No generator, transporter, handler, or owner or<br>operator of a treatment, storage, or disposal facility shall in any<br>way dilute a hazardous waste to meet the exclusion specifications of<br>Sections 4(h)(i)(A)(I), (i)(B) or (ii) of this Chapter.   |
| <u>261.38(c</u> | (G) Waste analysis plans. The generator of a<br>comparable/syngas fuel shall develop and follow a written waste<br>analysis plan which describes the procedures for sampling and<br>analysis of the hazardous waste to be excluded. The waste analysis<br>plan shall be developed in accordance with the applicable Sections of<br>the "Test Methods for Evaluating Solid Waste, Physical/Chemical<br>Methods" (SW 846). The plan shall be followed and retained at the<br>facility excluding the waste. |
| (i)             | (I) At a minimum, the plan must specify:   |
| (i)(A           | $\frac{(1.)}{hazardous}$ waste will be analyzed and the rationale for the selection  |

of those parameters;

| (i)(B) (2.) The test methods which will be used to test for these parameters;   |
|---|
| (i)(C) (3.) The sampling method which will be<br>used to obtain a representative sample of the waste to be analyzed;  |
| (i)(D) (4.) The frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up to date; and   |
| <u>(i)(E)</u> (5.) If process knowledge is used in<br>the waste determination, any information prepared by the generator ir<br>making such determination.   |
| (ii) (II) The waste analysis plan shall also contain records of the following:  |
| (ii)(A) (1.) The dates and times waste samples<br>were obtained and the dates the samples were analyzed;  |
| <u>(2.) The names and qualifications of</u> <u>the person(s) who obtained the samples;</u>  |
| <u>(ii)(C)</u> (3.) A description of the temporal and spatial locations of the samples;   |
| (ii)(D) (4.) The name and address of the laboratory facility at which analyses of the samples were performed;   |
| <u>(ii)(E)</u> (5.) A description of the analytical<br>methods used, including any clean-up and sample preparation methods;   |
| (ii)(F) (6.) All quantitation limits achieved<br>and all other quality control results for the analysis (including<br>method blanks, duplicate analyses, matrix spikes, etc.), laboratory<br>quality assurance data, and description of any deviations from<br>analytical methods written in the plan or from any other activity<br>written in the plan which occurred;   |
| (ii)(G) (7.) All laboratory results<br>demonstrating that the exclusion specifications have been met for the<br>waste; and  |
| (ii)(H) (8) All laboratory documentation that<br>support the analytical results, unless a contract between the<br>claimant and the laboratory provides for the documentation to be<br>maintained by the laboratory for the period specified in [paragraph<br>(c)(11) of this Section] Section 4(h)(iii)(K) of this Chapter and<br>also provides for the availability of the documentation to the<br>claimant upon request.  |
| (iii) (III) Syngas fuel generators shall submit for<br>approval, prior to performing sampling, analysis, or any management<br>of a syngas fuel as an excluded waste, a waste analysis plan<br>containing the elements of Section 4(h)(iii)(G)(I) of this Chapter to<br>the appropriate regulatory authority. The approval of waste analysis<br>plans must be stated in writing and received by the facility prior to<br>sampling and analysis to demonstrate the exclusion of a syngas. The<br>approval of the waste analysis plan may contain such provisions and<br>conditions as the regulatory authority deems appropriate. |

<u>261.38(c)(8)</u>

(H) Comparable fuel sampling and analysis.

(I) General. For each waste for which an exclusion is claimed, the generator of the hazardous waste must test for all the constituents on appendix H of this Chapter, except those that the generator determines, based on testing or knowledge, should not be present in the waste. The generator is required to document the basis of each determination that a constituent should not be present. The generator may not determine that any of the following categories of constituents should not be present:

...(i)(A) (1.) A constituent that triggered the toxicity characteristic for the waste constituents that were the basis of the listing of the waste stream, or constituents for which there is a treatment standard for the waste code in Chapter 13, Section 4(a) of these rules and regulations;

...(i)(B) (2.) A constituent detected in previous analysis of the waste;

...(i)(C) (3.) Constituents introduced into the process that generates the waste; or

<u>...(i)(D)</u> (4.) Constituents that are byproducts or side reactions to the process that generates the waste.

Note to Section 4(h)(iii)(H) of this Chapter: Any claim under this Section must be valid and accurate for all hazardous constituents; a determination not to test for a hazardous constituent will not shield a generator from liability should that constituent later be found in the waste above the exclusion specifications.

...(ii) (II) For each waste for which the exclusion is claimed where the generator of the comparable/syngas fuel is not the original generator of the hazardous waste, the generator of the comparable/syngas fuel may not use process knowledge pursuant to Section 4(d)(iii)(H)(I) of this Chapter and must test to determine that all of the constituent specifications of Section 4(h)(i)(B) and (ii) of this Chapter have been met.

...(iii) (III) The comparable/syngas fuel generator may use any reliable analytical method to demonstrate that no constituent of concern is present at concentrations above the specification levels. It is the responsibility of the generator to ensure that the sampling and analysis are unbiased, precise, and representative of the waste. For the waste to be eligible for exclusion, a generator must demonstrate that:

...(iii)(A) (1.) Each constituent of concern is not present in the waste above the specification level at the 95% upper confidence limit around the mean; and

...(iii)(B) (2.) The analysis could have detected the presence of the constituent at or below the specification level at the 95% upper confidence limit around the mean.

...(iv) (IV) Nothing in this paragraph preempts, overrides or otherwise negates the provision in Chapter 8, Section 1(b) of these rules and regulations, which requires any person who generates a waste material to determine if that waste is a hazardous waste.

...(v) (V) In an enforcement action, the burden of proof to establish conformance with the exclusion specification shall be on the generator claiming the exclusion.

...(vi)

(VI) The generator must conduct sampling and

has not been blended in order to meet the kinematic viscosity specifications shall be analyzed as generated. (VIII)If a comparable fuel is blended in ...(viii) order to meet the kinematic viscosity specifications, the generator shall: (1.) Analyze the fuel as generated to ...(viii)(A) ensure that it meets the constituent and heating value specifications; and (2.) After blending, analyze the fuel ...(viii)(B) again to ensure that the blended fuel continues to meet all comparable/syngas fuel specifications. (IX) Excluded comparable/syngas fuel must be ...(ix) re-tested, at a minimum, annually and must be retested after a process change that could change the chemical or physical properties of the waste. Speculative accumulation. Any persons (I) 261.38(c)(9)handling a comparable/syngas fuel are subject to the speculative accumulation test under Chapter 1, Section 1(f)(i), "waste material", (C)(IV) of these rules and regulations. <u>261.38(c)(10)</u> (J) Records. The generator must maintain records of the following information on-site: All information required to be (I) ...(i) submitted to the implementing authority as part of the notification of the claim: (1.) The owner/operator name, address, ...(i)(A) and RCRA facility ID number of the person claiming the exclusion; (2.) The applicable EPA Hazardous ...(i)(B) Waste Codes for each hazardous waste excluded as a fuel; and (3.) The certification signed by the ...(i)(C) person claiming the exclusion or his or her authorized representative. (II) A brief description of the process that ...(ii) generated the hazardous waste and process that generated the excluded fuel, if not the same; (III) An estimate of the average and maximum ...(iii) monthly and annual quantities of each waste claimed to be excluded; (IV) Documentation for any claim that a ...(iv) constituent is not present in the hazardous waste as required under Section (h)(iii)(H)(I) of this Chapter; The results of all analyses and all (V) ...(v) detection limits achieved as required under Section 4(h)(iii)(H) of this Chapter; (VI) If the excluded waste was generated ...(vi) through treatment or blending, documentation as required under Section 4(h)(iii)(C) or (D) of this Chapter; 2-90

analysis in accordance with their waste analysis plan developed under

(VII) Syngas fuel and comparable fuel that

Section 4(h)(iii)(G) of this Chapter.

...(vii)

| (vii)           | (VII) If the waste is to be shipped off-site,   |
|-----------------|---|
|                 | 4(h)(iii)(L) of this Chapter;   |
| (viii           | <u>(VIII)A waste analysis plan and the results</u><br>of the sampling and analysis that includes the following:   |
| <u>(viii</u>    | (1.) The dates and times waste samples were obtained, and the dates the samples were analyzed;  |
| <u>(viii</u>    | (2.) The names and qualifications of the person(s) who obtained the samples;  |
| (viii           | <u>)(C)</u> (3.) A description of the temporal and spatial locations of the samples;  |
| (viii           | (4.) The name and address of the laboratory facility at which analyses of the samples were performed;   |
| (viii           | (5.) A description of the analytical <u>(5.)</u> <u>methods used, including any clean-up and sample preparation methods;</u>  |
| (viii           | (6.) All quantitation limits achieved<br>and all other quality control results for the analysis (including<br>method blanks, duplicate analyses, matrix spikes, etc.), laboratory<br>quality assurance data, and description of any deviations from<br>analytical methods written in the plan or from any other activity<br>written in the plan which occurred;                 |
| (viii           | (7.) All laboratory analytical results demonstrating that the exclusion specifications have been met for the waste; and   |
| (viii           | (8) All laboratory documentation that<br>support the analytical results, unless a contract between the<br>claimant and the laboratory provides for the documentation to be<br>maintained by the laboratory for the period specified in Section<br>4(h)(iii)(K) of this Chapter and also provides for the availability<br>of the documentation to the claimant upon request; and |
| (ix)            | (IX) If the generator ships<br>comparable/syngas fuel off-site for burning, the generator must<br>retain for each shipment the following information on-site:   |
| (ix)(           | (1.) The name and address of the facility receiving the comparable/syngas fuel for burning;   |
| (ix)(           | B)<br>fuel shipped and delivered; (2.) The quantity of comparable/syngas  |
| (ix)(           | (3.) The date of shipment or delivery;  |
| (ix)(           | <u>(4.) A cross-reference to the record</u><br>of comparable/syngas fuel analysis or other information used to make<br>the determination that the comparable/syngas fuel meets the<br>specifications as required under Section 4(h)(iii)(H) of this<br>Chapter; and   |
| <u>(ix)(</u>    | (5.) A one-time certification by the<br>burner as required under [paragraph (c)(12) of this Section] Section<br>4(h)(iii)(L) of this Chapter.   |
| <u>261.38(c</u> | (K) Records retention. Records must be<br>maintained for the period of three years. A generator must maintain a<br>current waste analysis plan during a three year period.  |

- 261.38(c)(12)(L)Burner certification.Prior to submitting anotification to the State and Regional Directors, a comparable/syngasfuel generator who intends to ship their fuel off-site for burningmust obtain a one-time written, signed statement from the burner:
- ...(i) (I) Certifying that the comparable/syngas fuel will only be burned in an industrial furnace or boiler, utility boiler, or hazardous waste incinerator, as required under Section 4(h)(iii)(B) of this Chapter;

...(ii) (II) Identifying the name and address of the units that will burn the comparable/syngas fuel; and

...(iii) (III) Certifying that the state in which the burner is located is authorized to exclude wastes as comparable/syngas fuel under the provisions of this Section.

261.38(c)(13) (M) Ineligible waste codes. Wastes that are listed because of presence of dioxins or furans, as set out in appendix G of this Chapter, are not eligible for this exclusion, and any fuel produced from or otherwise containing these wastes remains a hazardous waste subject to full ^ hazardous waste management requirements.

#### Appendix A - Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, will be considered by the Agency to be representative of the waste.

Extremely viscous liquid -- ASTM Standard D140-70 Crushed or powdered material -- ASTM Standard D346-75 Soil or rock-like material -- ASTM Standard D420-69 Soil-like material -- ASTM Standard D1452-65

Fly Ash-like material -- ASTM Standard D2234-76 [ASTM Standards are available from ASTM, 1916 Race St., Philadelphia, PA 19103]

Containerized liquid wastes -- "COLIWASA" described in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods,"<sup>1a</sup> U.S. Environmental Protection Agency, Office of Solid Waste, Washington, D.C. 20460. [Copies may be obtained from Solid Waste Information, U.S. Environmental Protection Agency, 26 W. St. Clair St., Cincinnati, Ohio 45268]

FOOTNOTE:  $^{\rm la}{\rm These}$  methods are also described in "Samplers and Sampling Procedures for Hazardous Waste Streams," EPA 600/2-80-018, January 1980.

Liquid waste in pits, ponds, lagoons, and similar reservoirs. -- "Pond Sampler" described in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods."<sup>1a</sup>

This manual also contains additional information on application of these protocols.

Appendix B - Method 1311 Toxicity Characteristic Leaching Procedure (TCLP)

[\*Note: The TCLP (Method 1311) is published in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in Chapter 1, Section 1(g)(i)(L) of these rules and regulations.]

### Appendix C - Chemical Analysis Test Methods

[\*Note: Appropriate analytical procedures to determine whether a sample contains a given toxic constituent are specified in Chapter Two, "Choosing the Correct Procedure" found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in Chapter 1, Section 1(g)(i)(L) of these rules and regulations. Prior to final sampling and analysis method selection, the individual should consult the specific Section or method described in SW-846 for additional guidance on which of the approved methods should be employed for a specific sample analysis situation.]
